RE: New Hampshire Audubon comments on update to 'New Hampshire's 10-Year Energy Strategy'

October 31, 2017

Dear Director Chicoine:

I am writing to provide comments on behalf of New Hampshire Audubon regarding potential revisions to the New Hampshire 10-Year State Energy Strategy of 2014. We are a statewide non-governmental conservation organization of approximately 5,000 members dedicated to protecting New Hampshire's environment for wildlife and for people.

Our organization has a long history of involvement in energy issues. We have been actively involved in development of the 2007 Proposed Wind Power Siting Guidelines for New Hampshire, in the process that led to the 2014 NH State Energy Strategy, and in the 2015 process of rule revision for the Site Evaluation Committee.

This initial three-year update to the NH State Energy Strategy is particularly important, as it sets a precedent for subsequent updates. Overall, we believe that the recommended strategies identified in the 2014 document remain relevant and important to maintaining the New Hampshire Advantage. Pursuit of these strategies strengthens our State's economy, quality of life, and competitiveness in attracting business and industry. We therefore strongly recommend that the 2017 Strategy document focus on updates rather than alterations to the excellent work produced in 2014.

Specifically, we recommend that the revised document provide updates, with data summaries where appropriate, for items (a) through (h) in Chapter 276. 4-E:1. I. This is a time of rapid change in energy markets, technologies, and infrastructure, and providing a comprehensive source of current information on these topics is an important role of the State Energy Strategy.

Further, we recommend that the revised document itemize changes to state laws and policies related to energy that have been put in place since 2014. Perhaps most importantly, the document should address the progress (or lack

thereof) that has been made on each of the strategies identified in the Executive Summary of the 2014 document.

The 2014 State Energy Strategy provides comprehensive and appropriate guidance for actions to secure a sustainable, cost-effective energy future for the State. We are concerned that efforts to implement the recommended strategies have lagged behind similar efforts in neighboring states. We are particularly concerned about inadequate investment in energy efficiency measures, which continue to be the most cost-effective energy strategy available. Placing priority on energy efficiency, distributed generation, net metering, and improving transportation efficiency during the next three years would keep New Hampshire on track to create modern and responsive energy systems for the future.

In summary, we recommend that New Hampshire stay the course and increase the pace of implementation for the 2014 State Energy Strategy.

We appreciate the opportunity to comment.

Sincerely,

Douglas Bechtel, President

RE: State Energy Strategy

To Whom It May Concern:

Your office is developing a 10-year strategic energy plan. The following comments support clean energy policies for New Hampshire in order to create jobs and protect the environment. The State of New Hampshire needs to:

1. Make conservation a priority in all policy decisions. Promote energy efficiency in all buildings and support maximum reuse, composting, and recycling of materials.
2. Phase out dirty sources of electric power, including coal-fired power plants, wood biomass incinerators, the Seabrook nuclear power plant, and the Wheelabrator trash incinerator in Penacook. These facilities pollute, waste resources, and undermine solar, wind, and recycling initiatives.
3. Oppose additional fossil fuel infrastructure.
4. Oppose fracking and additional pipelines.

I have enclosed a recent report from Harvard University regarding dwindling forests in New England. Wood biomass incinerators for electric generation are not sustainable.

Recycling also plays an important role in the state's energy plan. More energy is saved with recycling than is generated by burning the same materials in a "waste-to-energy" incinerator such as Wheelabrator's in Penacook.¹

¹ Working on Waste. (Fall 2011, addendum 2015). The Wheelabrator Incinerator in Claremont, NH: A Working on Waste Report. Page 11. <http://www.americanhealthstudies.org/wheelabrator-claremont.pdf>

The destructive environmental policies of the Trump Administration threaten our future. We need to chart our own course. Please take the steps needed to put us on an energy path that is fair and safe for all New Hampshire residents.

Sincerely,

Katie Lajoie, RN

New England is losing 65 acres of forest a day

Harvard report pushes for renewed focus on conservation

September 21, 2017 | Editor's Pick

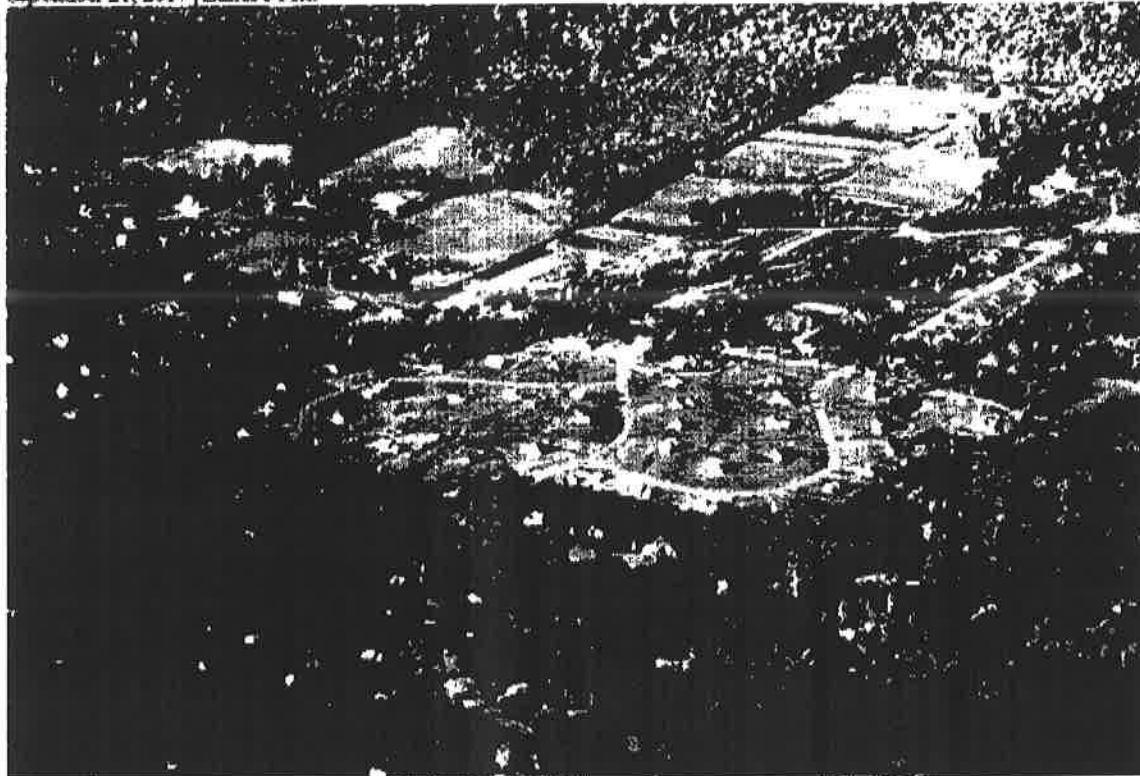

Photo by David Foster

Development claims 24,000 acres of forestland a year in New England, according to data from 1990 to 2010. By 2060, that could mean another 1.2 million acres lost.

By Alvin Powell, Harvard Staff Writer

[Email](#) [Twitter](#) [Facebook](#)New England is in danger of squandering its conservation “second chance,” according to the authors of a new [Harvard Forest](#) report.

The region, heavily deforested in colonial days, is today one of the most densely wooded in the world, thanks to forests that regenerated over the past 150 years as farms were abandoned for city life.

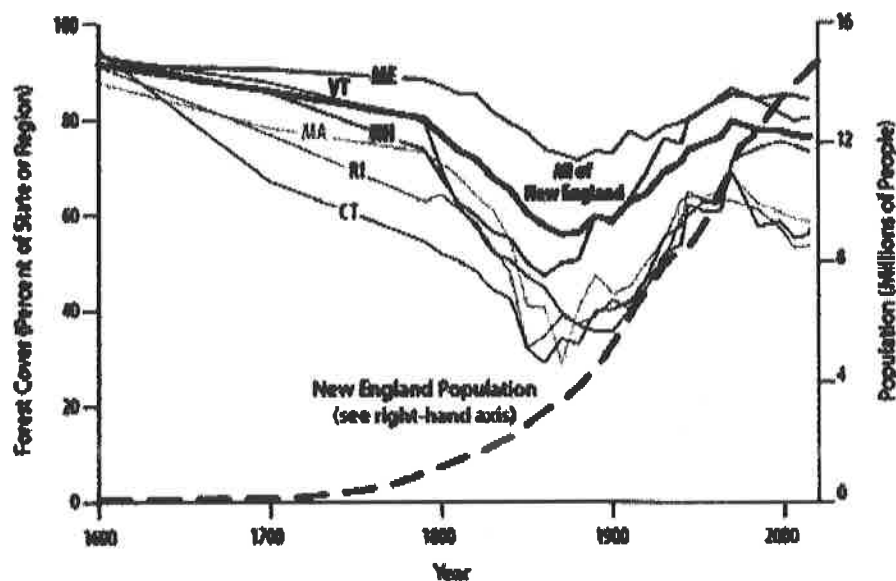

But that reforestation has peaked, and New England is now losing 65 acres of forest to development each day, [the report says](#). In addition, funding for land conservation has fallen 50 percent since 2008, and the acreage conserved annually is also down, falling more than sixfold since the early 2000s, from 333,000 acres a year to about 50,000 acres a year since 2010.

“Peak forest cover is over in New England,” said [Jonathan Thompson](#), a senior scientist at Harvard Forest and one of the report’s 31 authors. “For more than 150 years, forests expanded and regrew. That history is how we gained the status as among the most populated and most forested regions in the world.”

10/31/2017

Harvard research reports major forest loss in New England | Harvard Gazette

New England Forest Cover and Human Population

The second wave of forest loss now under way in New England jeopardizes the region's environmental success story, which has been characterized by the return of forests following the decline in agriculture in the East.

Modified from Foster and Aber (2004) with additional data from USFS FIA state reports. Foster, D.R. and J.D. Aber. 2004. *Forests in time*. Yale University Press, New Haven, Conn.

Thompson said that about 88 percent of New England is forest or farmland, but that development — 50 percent of which is residential — amounts to a “hard, permanent” deforestation that removes the land from natural uses for the foreseeable future.

“If current rates continue, New England will lose another 1.2 million acres by the year 2060 — that’s an area nearly twice as big as Rhode Island,” he said.

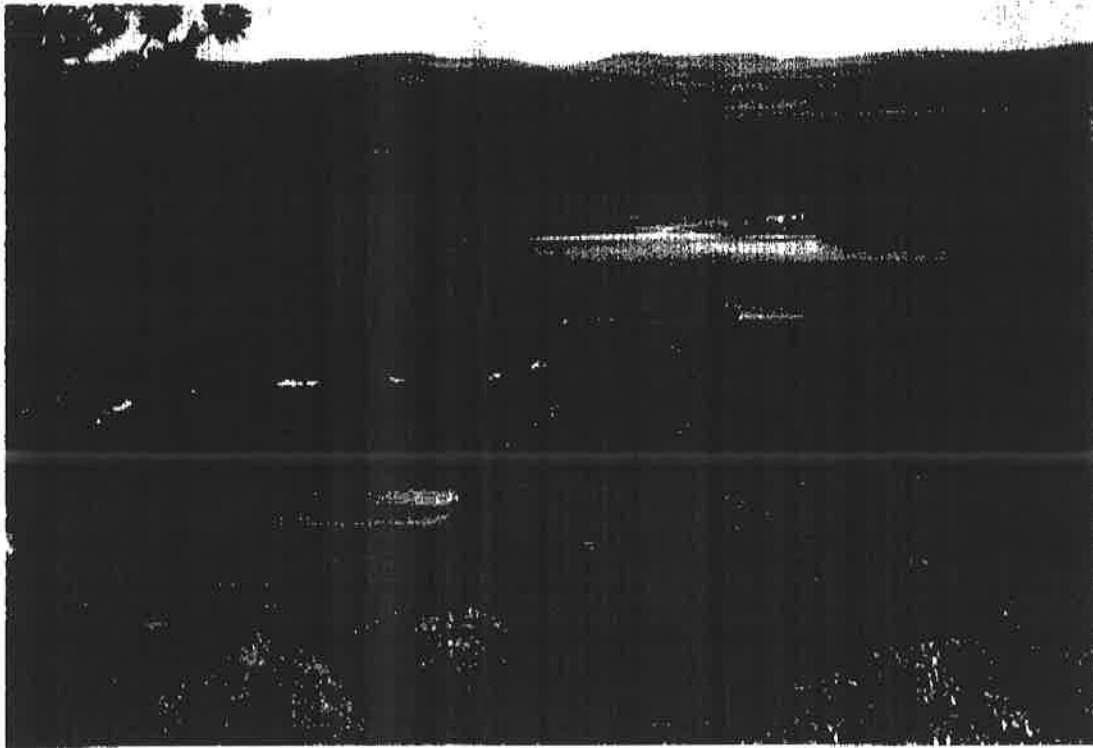

While climate change threatens to alter natural communities and favors some species over others, development eliminates ecosystems altogether, Thompson said. In addition, he said, land is our biggest asset in fighting climate change, with growing trees locking up carbon and natural areas buffering the effects.

The report, “Wildlands and Woodlands, Farmlands and Communities,” calls for tripling conservation efforts across the region, with the aim of setting aside 30 million acres of forest covering 70 percent of New England, as well as all of its remaining farmland. Ten percent of the conserved acreage would be set aside as wildland, while the rest would be managed sustainably for wood products and other forest-related benefits.

In order to achieve that level of conservation, the report’s authors call for increased public funding, integrating land conservation with urban and municipal planning, and ensuring that land dedicated for economic development is used as efficiently as possible.

10/31/2017

Harvard research reports major forest loss in New England | Harvard Gazette

Conserved forests like those around the Quabbin Reservoir provide clean drinking water to millions of New England residents without the need for filtration plants. Photo by Clarisse Hart

Harvard Forest Director [David Foster](#), the report's senior author, sees cities and towns as partners in such efforts. He offered the example of former mill towns that have seen redevelopment of industrial buildings, creating desirable residential areas that are near transportation and other infrastructure.

Despite the negative trends noted in the report, Foster said there are reasons for optimism. The region has a long history of support for land conservation, and in recent years regional conservation partnerships have multiplied. State and municipal efforts have also been expanding. For example, the Massachusetts Community Preservation Act allows towns to add a surtax to land transfers and direct the revenue to preservation. The program is voluntary, but 11 towns signed on last year, bringing the total to 173, nearly half the state's 351 communities.

Another positive factor, Foster said, is that conservation opportunities abound. Conservation organizations are regularly contacted by landowners interested in setting aside land or protecting it from development. The problem, Foster said, is that for many of these individuals, much of the wealth is tied up in the land, which makes the development of innovative programs and identifying new funds important.

"There are more opportunities than we can handle," Foster said.

Foster noted growing recognition of the benefits of conserving forests, creating opportunities for an array of partnerships — such as with health care organizations that recognize the benefits of natural areas — that may not have been possible in the past.

"The capacity for conservation in New England is unrivaled in the world," he said. "We know that there are huge emerging opportunities for land protection and we know that when similar opportunities occurred in the past, the states, local municipalities, and conservation organizations collaborated to seize on these."

Dear Commissioners,

As a civil engineer you must know human beings must live in symbiosis with our planet. Please take care of our state, our planet; this is not the time to focus on getting to the white house.

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Dear Commissioners,

Coal and Oil, however obtained, are polluting and outdated sources of energy, especially when so many sources of renewable energy are either affordable and available now or will be in the near future. NH needs to join in the effort to move from the old, dirty energy to the newer, cleaner energy sources.

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

Dear Commissioners,

Governor Sununu, You cannot be serious wanting to add coal for a fuel supply for NH residents' power needs. That's pathetic. There is no such thing as "clean coal" and will not be in our lifetime. I live in Seabrook and am OK with nuclear and believe in that technology if we can finally determine how to dispose of spent fuel rods but we need to invest more in the future, which is wind and solar. Go to Europe, Block Island or Upstate New York (wind) or the American Southwest (solar) and see where the action is. Respectfully, Chas Chesler, Seabrook

Dear Commissioners,

In recent years electric-power-generating companies have artificially raised energy prices in New England by quietly setting aside gas every day against the possibility they may run out . This hidden practice distorts the whole picture of the availability of gas in New England and discourages public participation in planning development. This has been described in a recent academic study, "Vertical Market Power in Interconnected Natural Gas and Electricity Markets," commissioned by the Environmental Defense Fund:

<https://www.edf.org/sites/default/files/vertical-market-power.pdf>

This new study could usefully inform the implementation of New Hampshire's 10-Year Energy Strategy.

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

Dear Commissioners,

It is time to commit to a healthy sustainable future.

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

John Matthias

Dear Commissioners,

Please do not approve the Northern Pass Project. IT is a bad deal for NH and our tourism. In the end the people of Massachusetts will save the equivalent of a small cup of coffee on their electric bill. Not worth the caous and destruction that will take it's toll n our mountains! THink green energy and new technologies!

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Deb Cinamon Whalen

INITIATIVES

Dear Commissioners,

we can and should be the cleanest and healthiest plus best educated and most innovative state in the country, maybe the world. we're capable so only political malfeasance could prevent it!!!

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Dear Commissioners,

Why take a step backwards? Many countries, even some less advanced than NH, recognize the need to PRIORITIZE clean energy alternatives. Why distract from that goal with re-looking at options that are only short term fixes. Surely you are not naive enough to follow Trump and Pruitt's poorly thought out capitulation to the fossil fuel lobby.

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

OFFICE OF STRATEGIC
INITIATIVES

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Jennifer Wilhelm

OFFICE OF STRATEGIC
INITIATIVES

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Joyce Clough

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

OFFICE OF STRATEGIC
INITIATIVES

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Dominic Libby

Dear Commissioners,

OFFICE OF STRATEGIC
INITIATIVES

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Russell Osgood

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

OFFICE OF STRATEGIC
INITIATIVES

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Derek Haddad

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

INITIATIVES

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Lucius Sorrentino

OFFICE OF STRATEGIC
INITIATIVES

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Patricia Toussaint

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.

Sincerely,

Jo Barrett

OFFICE OF STRATEGIC
INITIATIVES

Dear Commissioners,

The 2014 10 Year NH Energy Strategy is only 3 years old. Granite Staters across the state spent months developing that plan. We do not need more talk -- we have a good plan that is well informed to address the energy needs of the state. Please let the current plan work:

- 1.) The 2014 NH 10 Year Energy Plan needs time and addresses the state's challenges.
- 2.) The best way to save money is to invest in energy efficiency - the more we invest, the more we save! More investment into our communities is needed to improve workforce housing, schools, residential and commercial buildings;
- 3.) The rate of return for solar energy and offshore wind is the cheapest, fastest way to increase energy diversity while boosting our economy with local jobs and local installations. Building transmission lines and pipelines takes years and billions of dollars before they ever light up a room.
- 4.) Electric cars with a charging network will help clean up the transportation sector. Investments like this will attract more people to love the White Mountains and live in New Hampshire.
