I. Introduction

A. Summary

Pursuant to RSA 162-F, FPL Energy Seabrook, LLC ("FPLE Seabrook"), in its capacity as managing agent of the Seabrook Nuclear Power Station ("Seabrook Station" or the "Plant") hereby submits to the Nuclear Decommissioning Financing Committee ("NDFC" or the "Committee") the 2006 Annual Report of the Seabrook Station Decommissioning Trust Performance and funding schedules for all joint owners of the Plant, the analysis for which was prepared by Prime Buchholz & Associates ("Prime Buchholz"). *See* Attachment A.

Since the Committee's Final Order in Docket No. 2005-1 issued on December 15, 2005, and Order approving the appropriate funding schedules designed to achieve the targeted fund balance at the time the funds are needed for decommissioning issued on December 22, 2005, there have been no material changes to the cost to decommission the plant, earnings assumptions, cost escalation, or the financial assumptions embedded in the funding schedules. The Decommissioning Trust Fund ("Decommissioning Fund" or "Fund") balance was lower than projected in the funding schedules approved in Docket No. 2004-1, but performed approximately as projected in the funding schedules recently approved by the Committee in December, 2005, which continues to support the Committee's guidance that the funding schedules should be established using Fund balances that are as up to date as possible. *Compare* (projected year-end Fund balance from NDFC 2005-1 Order of \$341.1 million) with (actual, audited year-end Fund balance of \$339.5 million reported by Prime Buchholz).

As will be discussed in more detail below, the one significant change to the overall decommissioning funding picture for the Plant is that the Nuclear Regulatory Commission ("NRC") has approved the Plant's application for recapture, and thereby extended the Plant's operating license by 3.4 years, to March 15, 2030. A corresponding modification to the funding

date would have a significant, and very positive, impact on the status of the Fund and the contributions necessary to achieve the targeted Fund balance as of the funding date. In this Annual Report, FPLE Seabrook, on behalf of all of the Joint Owners, requests that the Committee approve a March 15, 2030 funding date and, consistent with prior orders from the Committee, has submitted for approval funding schedules that are designed to achieve the targeted Fund balance by the modified March, 2030 funding date.

B. Fundamental Assumptions

1. Plant Operation and Financial Assurances – No Changes

From an operations perspective, the Plant continues to run very well and the likelihood of a premature shutdown continues to be very low. In the unlikely event such a shutdown occurs, assurance that the ultimate obligation to decommission the Plant will be paid is backed soundly and by different mechanisms. The minority owners' share of the decommissioning cost is backed by their customers/owners. FPLE Seabrook's decommissioning obligation, backed by FPL Group, Inc.'s ("FPL Group") financial strength, provides additional assurance from both the Fund balances and financial guarantees that each owner's ultimate obligation to decommission will be met.

2. Seabrook Ownership – No Changes

There have been no changes in the Seabrook ownership structure since the 2003 Application. The joint owners and their respective ownership shares are as follows:

FPLE Seabrook	88.22889%
Massachusetts Municipal Wholesale Electric Company	11.59340%
Taunton Municipal Lighting Plant	00.10034%
Hudson Light & Power Department	00.07737%
•	100%

3. Fund Investment Allocations

In the 2005 Annual Report and subsequent Stipulation of the Parties, FPLE Seabrook reported that it intended to reach, by year-end 2006, a 65% allocation of its Fund balance to equities. For the Committee's information, FPLE Seabrook is on track to achieve that targeted allocation by year-end 2006 and, at this point, intends to maintain that equity target percentage through the operating life of the Plant.

MMWEC's position on future financing remains as it was articulated in the Stipulation in Docket No. 2005-1: MMWEC is moving toward a targeted 65% equity allocation by directing 75% of its contributions to equity investments. Depending on market conditions, MMWEC may consider reallocation from the fixed income fund to arrive at the targeted 65% equity allocation sooner. *See* Stipulation, ¶3.11.

Since the last Annual Report, Taunton and Hudson have determined to move away from an all-bonds portfolio to portfolios that include 30% in equity investments. Both intend to reach these allocations through re-direction of future contributions and do not, at this time, envision the transfer of funds from the bond accounts to achieve the targeted allocation. More specifically, Taunton and Hudson have directed that 100% and 75%, respectively, of their future contributions should be invested in equities until the targeted equity allocations are achieved. Consistent with the existing funding schedules approved by the Committee, the proposed funding schedules (*see* Attachment D), incorporate these moves to higher equity allocations.

4. Funding Date - Request for Modification to March, 2030

On March 28, 2005, FPLE Seabrook filed with the Nuclear Regulatory Commission ("NRC") for approval of recapture of the zero-power and low-power testing period during which the Plant was licensed, but not operating. By letter dated December 28, 2005, the NRC approved

FPLE Seabrook's request and extended the operating license for the Plant by 3.4 years, to March 15, 2030. *See* Attachment B. As set forth below, consistent with the Committee's prior decisions, FPLE Seabrook requests that the Committee set the funding date to correspond to the March 15, 2030 license life of the Plant.

The applicable legislation defines the funding date as "the date established by the committee at which time the fund shall have sufficient moneys to complete decommissioning." See RSA 162-F:14, VII; see also 162-F:19, III. The decommissioning activities begin in earnest following the shutdown of the Plant and, accordingly, it made sense for the Committee to establish the funding date to correspond with the Plant's operating license; that is, at the time the Plant shuts down, there must be dollars in the Decommissioning Fund which, together with earnings, are sufficient to fund the cost of decommissioning the Plant. See, e.g., Final Report and Order, NDFC Docket No. 2003-1, p.37 ("The NDFC has the responsibility of ensuring that adequate funds are available to meet all decommissioning costs at the time Seabrook Station is promptly decommissioned at the end of its useful life.").

The same logic makes sense today. The dollars to decommission the Plant are needed at the current end of the Plant's operating life: March, 2030. Accordingly, FPLE Seabrook requests that the Committee modify the funding date from October, 2026 to March, 2030.

In anticipation of the NRC approving FPLE Seabrook's request for recapture of the low power testing period, FPLE Seabrook has in prior filings submitted examples of the impact of modifying the funding date to March, 2030. To provide the Committee with that same comparison, FPLE Seabrook requested for this filing that Prime Buchholz prepare schedules assuming both (1) the current funding date (October, 2026) (see Attachment C, hereto), and (2) a funding date that corresponds to the approved license life (March, 2030) (see Attachment D).

For purposes of clarity, Attachment D is the schedule that incorporates the assumptions that FPLE Seabrook proposes the Committee approve for use for contributions to be made beginning in calendar year 2007.

As FPLE Seabrook has previously reported, the impact of the change in the Plant's operating license, assuming a corresponding change to the funding date, has a substantial impact on annual contributions. As the owner of more than an 88% interest in the Seabrook Station, the bulk of the decommissioning expenditures will be paid out of FPLE Seabrook's decommissioning trust fund accounts. As such, in meeting the Committee's goal of assuring that adequate funds are available to decommission the Plant, perhaps far more important to the Committee than the impact on current year contributions is the significant change in the status of FPLE Seabrook's funding level.

More specifically, if the funding date is modified to correspond to the new license date, the additional earnings on peaking fund balances (*i.e.*, earnings on the Fund balance from 2026-2030) means that FPLE Seabrook's portion of the decommissioning obligation is already overfunded by more than \$625 million. *See* Attachment D, p.4 (reflecting that, with no further contributions by FPLE Seabrook, there will be in excess of \$628 million remaining in FPLE Seabrook's decommissioning trust accounts after all decommissioning expenses have been paid). The amount of over-funding would obviously increase exponentially if the Plant obtains a 20-year license extension, but it is noteworthy that, absent a premature permanent cessation of operations, approval of the recapture application means that 100% of FPLE Seabrook's decommissioning obligations are already fully-funded and, indeed, over-funded by more than \$625 million.

5. The NRC's Approval Of FPLE Seabrook's Recapture Application And Corresponding Extension Of The Plant's Operating License To March, 2030 Should Impact The Contributions To The Funding Assurance Escrow.

Due to erroneous deposits made to the Fund that should have been deposited into the escrow accounts, the 2005 year-end balance in the funding assurance escrow accounts was \$4.1 million, approximately \$800,000 less than projected in the Committee's Order No. 2 in Docket No. 2004-1. Corrective transfers from the Decommissioning Fund to the escrow accounts will be made as soon as authorized by the Committee. In addition, contributions from October-December, 2006 will be \$3.4 million under the Order from the Committee in Docket No. 2005-1, which together with earnings, results in a projected year-end 2006 escrow balance of approximately \$8.6 million. The 2006 year-end escrow balances for the individual Joint Owners are projected to be as follows:

FPLE Seabrook	\$6,	357,758
MMWEC	\$2,	140,581
Taunton	\$	30,880
Hudson	\$	23,683
Total	\$8,	552,902

The purpose of the funding assurance escrow is to provide a means of ensuring that decommissioning is adequately funded, but avoiding over funding that may result in hundreds of millions (or perhaps billions) of dollars being tied up unnecessarily for decades in a decommissioning trust fund pending completion of all decommissioning activities. *See, e.g.*, Final Report and Order, NDFC Docket No. 2003-1, p.37; *see also* Attachment D (proposed funding schedules). One of the main considerations favoring use of a funding assurance escrow was the thought that it was likely that FPLE Seabrook would seek, and gain approval of, license recapture from the NRC:

The concept of dividing contributions between the Decommissioning Trust and the escrow account is acceptable and will be used because, while the evidence

addressed in this proceeding supports the overall contribution level, there is some basis to expect changes, such as license recapture, that would diminish the need for that level of contribution. Nonetheless, the record in this case is insufficient to adopt a lower level of contributions because the recapture at present is a mere expectation and timing is unknown.

(*Id.*, p.41.)

The Committee made clear in the Final Report and Order in Docket No. 2003-1, and in subsequent orders, that the decision whether to release funds from the escrow accounts will involve all factors relevant to the Committee's obligation to ensure adequate funding for decommissioning, and is within its sole discretion. Because of the impact of recapture on necessary funding levels, however, when approving the use of a funding assurance escrow in Docket No. 2003-1, the Committee included recapture as an important milestone for the Committee's consideration of a request to release escrow funds to one or more of the Joint Owners:

While the Committee is unwilling to establish a definitive criterion for release of funds from the escrow account, either progress towards meeting the total funding of decommissioning costs or Seabrook Station receiving NRC approval of the recapture period will be a significant factor the Committee will consider when determining the distribution of the escrow account.

(*Id.*, p.43.)

The Final Report and Order in Docket No. 2003-1 contemplated that the Joint Owners could seek release of the escrow funds upon NRC approval of the recapture period. *Id.*, p.44 ("If the Committee does not release funds from the escrow as a result of the Seabrook Station receiving approval of license recapture or for some other reason, the escrow account will be terminated after the conclusion of the next comprehensive review by the NDFC, which is expected to be conducted in 2007."). Notwithstanding this contemplation, and the fact that FPLE Seabrook is, with modification of the funding date to March 2030, already over-funded, the Joint Owners do not herein request release of the dollars in the escrow accounts. Rather,

while obtaining recapture should, as the Committee has previously stated, remain a material consideration to the determination of whether funds should be released from the escrow accounts, the Joint Owners propose that the escrow funds should remain in place and that the Committee consider whether to release some or all of the escrow funds during the 2007 comprehensive review.

While FPLE Seabrook is not at this time requesting release of the escrow funds, in addition to overcoming one of the hurdles the Committee has deemed important, the extension of the operating license to 2030 has a significant impact on necessary funding levels. Indeed, as set forth above, without making any additional contributions, FPLE Seabrook's decommissioning accounts are already over-funded by more than \$625 million. As such, contributing an increased amount to the funding assurance escrow accounts in 2007, as the Joint Owners will in 2006, would be counterintuitive (*i.e.*, now that the Plant's operating license has been extended, it is counterintuitive to increase the amounts contributed to the escrow accounts when one of the significant factors for release of those funds has been achieved). Instead, the Joint Owners propose that contributions to the escrow accounts for 2007 should be set at 25% of each owner's funding calculation, as envisioned by the Committee in the orders flowing from Docket Nos. 2003-1 and 2004-1.

As noted above, FPLE Seabrook anticipates addressing the propriety of releasing the escrow funds when the cost to decommission the Plant is updated in the 4-year review in 2007, but suggests that enhanced contributions to the funding assurance escrow are not warranted, particularly for FPLE Seabrook given its already significantly over-funded position.

6. The Joint Owners Continue to Make Significant Progress Toward Fund Balance to Target Cost Goals

As noted above, the Committee in the Final Report and Order in Docket No. 2003-1 also identified achieving certain fund balance to target decommissioning costs as a consideration for the release of funds in the escrow accounts. In that Order, the Committee's expectation was that, by year-end 2007, the fund balance would be 57% of the projected decommissioning cost. To reflect a realignment of fund balances and projected decommissioning costs, that percentage was reduced to a 55.5% targeted fund balance to projected decommissioning cost in Docket No. 2004-1. *See* Final Report and Order, NDFC Docket No. 2004-1, p.11.

In Docket No. 2005-1, the Committee approved changes to the investments during the so-called tail period, permitting a modest level of investments in equities and bonds in light of the significant duration of the decommissioning period. Those changes led to a reduction in the level of contributions to the Decommissioning Fund (to approximately \$2.6 million) and, based on the suggestion of the Joint Owners, the amounts contributed to the escrow accounts for 2006 were increased (to approximately \$3.4 million). The reduction in contributions to the Decommissioning Fund approved by the Committee in the Final Report and Order in Docket No. 2005-1 resulted in a then-projected Fund balance to target cost percentage for year-end 2007 of 54.5% (projected Fund balance of \$398,259,696/ projected cost of \$731,207,776).

Because, relative to the other Joint Owners, FPLE Seabrook is "ahead" of the funding curve, even with these reductions in contribution levels, FPLE Seabrook's Fund balance to target cost by year-end 2007 under the schedule approved by the Committee in Docket No. 2005-1 is actually projected to exceed the 2007 year-end target established by the Committee and reach approximately 56.8% (i.e., projected Fund balance of \$366,319,175/projected share of

decommissioning cost of \$645,136,504) and remains projected to be over 57.1% using the current proposed schedule (*see* Attachment D, p.4).

Although perhaps a helpful snapshot, the current projections are of somewhat limited use because, unless both the Fund performance and the targeted decommissioning cost remain precisely as projected, the Fund-balance-to-target-cost projection percentage as of December 31, 2007 is as yet unknown. Most particularly, pursuant to the Committee's Final Report and Order in Docket No. 2005-1, FPLE Seabrook will be filing in February, 2007 the 4-year comprehensive review during which the Committee will establish the projected cost to decommission the Plant. It is obviously unknown presently whether the decommissioning cost established in the upcoming 4-year review will be higher or lower than the current projected 2007 year-end decommissioning cost of \$731,207,776, but as the denominator in the equation, the updated cost determination will have a significant impact on the calculated Fund-balance-to-target-cost-percentage.

FPLE Seabrook respectfully requests that the Committee approve the payment schedule proposed for each Joint Owner (Attachment D), and payments into the funding assurance escrow accounts (Attachment E), as presented in Section VIII below. What follows is the additional information that supports this application.

II. Plant Performance Since Acquisition by FPLE Seabrook.

A. Operational Performance

The Seabrook plant continues to run very well since FPLE Seabrook's acquisition. The unit capacity factor in the operating cycles between refueling outages is a good indicator of plant performance in that it reflects the total amount of generation actually produced in a given cycle

in comparison to the plant's rated capacity times the number of potential hours of operation during that same period.

Since the acquisition by FPLE Seabrook, the Plant has achieved an average capacity factor of 94.0% for the period from 2003 through 2005. Over its last completed operating cycle (cycle 10), running from October 2003 until the shutdown for the refueling outage on March 31, 2005, the Plant achieved a capacity factor of 98.68%, including a continuous run of 497 days, which is a record for the Plant. There have been no forced outages since the Plant reached full power following the May 2005 refueling outage and the capability factor for operating cycle 11 to date (February 2006) is 99.23%. In addition, the Plant has maintained a capability factor of 93.1% for the period of 2003 through 2005. The capability factor is the ratio of the energy generated over a period to the reference energy generated expressed as a percentage. The capability factor takes into account planned and unplanned energy losses such as refueling outages or forced outages. See Table 1.

In the area of environmental compliance, Seabrook has received the highest rating from the New Hampshire Department of Environmental Services ("NHDES") in the last six periods it has been evaluated. This inspection is typically performed annually and evaluates Seabrook Station's ability to self-monitor and comply with the effluent limits and compliance schedules in the Plant's National Pollution Discharge Elimination System ("NPDES") Permit. NHDES performed an inspection of Seabrook Station most recently on October 6, 2005. The inspection report concluded that Seabrook Station has a "very reliable" self-monitoring program. The top rating of "5" was assigned to the Seabrook Station program. This was the sixth consecutive top rating assigned to the NPDES Permit program. In addition, FPLE Seabrook underwent an

annual review by the ISO accrediting organization and its ISO 14001 certification remains in effect for the final two years of the three-year certification period.

In summary, the Plant is running very well, there are no major maintenance issues on the horizon, and there is no reason to believe the Plant will not continue to run at or above its historical capability factor levels.

B. Changes at the Seabrook Plant

In the 2005 filing, FPLE Seabrook reported on the successful implementation of the first phase of the power uprate that resulted in a 66MwE capacity increase at the Plant, to 1272 MwE.

The second application to modify the unit to increase capacity by approximately 1.7% was submitted to the NRC on September 22, 2005. FPLE Seabrook anticipates approval of this application prior to September 30, 2006 and intends to implement the approved modification during the 2006 refueling outage, currently scheduled to begin in October 2006.

The 2006 refueling outage is currently scheduled to last 30 days, during which time FPLE Seabrook plans to complete several major activities listed below, in addition to the power uprate. The activities scheduled for completion during the 2006 outage are not indicative of any operational problems at the Plant. To the contrary, as described above, the Plant continues to operate at a very high capability factor. Rather, the scheduled activities fall into the general categories of proactive preventative maintenance and enhancements to improve the operational performance of the Plant, or actions that are regulatory requirements.

The major activities for the 2006 refueling outage will be as follows: 1) ultrasonic cleaning of the reactor fuel (enhancement); 2) reactor vessel split pin replacement (preventive maintenance); 3) non-destructive examination of the reactor vessel head penetrations (regulatory requirement); 4) modifications to the containment sump to address NRC Generic Letter 2004-02

(regulatory requirement); 5) primary and secondary side inspections of the four steam generators (regulatory requirement); 6) containment jib crane upgrade (enhancement); 7) main generator rewind (enhancement); 8) installation of a static exciter for the main generator (enhancement); and 9) recovery of approximately 13 MwE capacity not achieved during the first phase of the power uprate (enhancement).

C. Financial Performance

As of December 31, 2005, FPLE Seabrook has contracted 90% of its share of Seabrook's output for the balance of 2006, 95% and 81% of the on-peak and off-peak output, respectively, for calendar year 2007, and 72% and 62% of the on-peak and off-peak output, respectively, for 2008. These contract percentages are in line with FPLE Seabrook's targets for the Plant and assure a stable stream of revenue well into the future. FPLE Seabrook has been able to lock in prices for this output at levels above those assumed in the projections submitted to the Committee in Docket No. 2002-2. In addition, the unit thus far has been operating at a capability factor above that assumed in the original valuation. With its excellent operational and financial performance, FPLE Seabrook has not had occasion to call upon any of the amounts available under the support agreement with FPL Group Capital nor does it anticipate doing so.

Nevertheless, that agreement remains as part of the financial support for the Plant.

The public power owners' (MMWEC, Taunton and Hudson) financial performance has not changed materially since the last filing.

III. FP&L Nuclear Performance

A. FP&L Operational Performance

Florida Power & Light Company ("FP&L") operates four nuclear units, two at Turkey Point Nuclear Plant (1,386 MW) and two at St. Lucie Nuclear Plant (1,553 MW). Performance

of the 103 nuclear power reactors in the United States is monitored by the World Association of Nuclear Operators ("WANO") using a composite index based on indicators of safety and reliability. At the end of 2005, FP&L Nuclear Division's four units average index rate was 81.5; Seabrook Station ended the year with an index of 100.0. (See Table 2). The FP&L Nuclear Division's average index for 2005 was affected by several factors, including increased durations for refueling outages due to major component replacements. More specifically, the reactor vessel head was replaced at Turkey Point Unit 4 and the reactor vessel head and the pressurizer were replaced at St. Lucie Unit 1. The major equipment replacements were proactive measures taken to address NRC generic concerns regarding alloy 600 use in the reactor coolant system. The Turkey Point facility was also affected by some vendor related issues involving equipment availability and reliability. The Turkey Point and St. Lucie sites were in the path of Hurricane Wilma and required actions to recover from the effects of the hurricane. As an example, the hurricane adversely affected the St. Lucie 2 refueling outage and extended the outage by approximately six days due to damage to the infrastructure in the local towns and communities. The factors that affected the FP&L Nuclear Division's units are specific to the Florida plants and do not affect the operation or performance of Seabrook Station.

FP&L's Nuclear Division average for Unit Capability Factor was 85.1, which included scheduled refueling outages for Turkey Point Unit 4 and St. Lucie Unit 1 and Unit 2; Seabrook's Unit Capability Factor was 93.2 (See Table 1). The FP&L Nuclear Division units' NRC Performance Indicators are currently in the bands that the NRC Regulatory Oversight Process ("ROP") defines as safe and reliable. The Performance Indicators for St. Lucie are all in the green band, while Turkey Point Unit 3 and Unit 4 each have one Performance Indicator (auxiliary feedwater ("AFW") in the Mitigating System Cornerstone.) in the white band. The

white color signifies operation outside of the nominal or reference performance band, but at a level that still meets the objectives of the ROP. The AFW system moved to the white band due to an aforementioned vendor equipment problem related to the repair of an auxiliary feedwater pump. Corrective actions have been taken and the system is performing per its design. FPLE Seabrook has reviewed the operating experience at the Florida plants and has found no issues that would apply to Seabrook Station.

B. FPL Group Financial Performance

FPL Group is one of the nation's largest providers of electricity-related services. Its principal subsidiary, FP&L, continues to experience substantial customer growth in its service territory. Operational excellence and a consistent track record of cost management have enabled the Company to provide value to both customers and shareholders. FPL Energy, FPL Group's competitive energy business, is primarily a moderate-risk, wholesale-energy generator. FPL Energy is well diversified by region and by fuel source with a hedging strategy that focuses on reducing risk and extracting maximum value from its assets.

FPL Group's financial strength is recognized by the Rating Agencies. FPL Group's credit ratings are among the highest in the industry. The credit ratings currently assigned by Moody's Investors Service, Inc. ("Moody's"), Standard & Poor's Ratings Services ("S&P") and FitchRatings ("Fitch") to FPL Group, FP&L and FPL Group Capital are as follows:

FPL Group:	Moody's	S&P	Fitch
Corporate credit rating	A2	A	A
FPL:			
Corporate credit rating	A1	A/A-1	N/A
First mortgage bonds	Aa3	A	AA-
Pollution control, solid waste disposal And industrial dev. revenue bonds	Aa3/VMIG-1	A/A-1	A+
Commercial paper	P-1	A-1	F1

FPL Group Capital:			
Corporate credit rating	N/A	A/A-1	N/A
Debentures	A2	A-	A
Commercial paper	P-1	A-1	F1

FPL Group's financial position continues to strengthen as demonstrated in the following table of Adjusted Total Debt / Capital (%) as calculated and published by Standard & Poor's as of December 31, 2004.

Ratio	20041	2003	2002	2001
Adjusted Total Debt / Capital	50.8%	53.1%	54.0%	56.3%

In addition, FPL Group and its subsidiaries, including FP&L, have \$4.5 billion (\$2.5 billion for FPL Group Capital and \$2.0 billion for FP&L) of bank lines of credit currently available. These credit facilities are available to support the companies' commercial paper programs and to provide additional liquidity in the event of a transmission and distribution property loss, as well as for general corporate purposes.

Unprecedented back-to-back hurricane seasons have depleted FP&L's storm reserve, left more than \$1 billion in unrecovered storm restoration costs and have heightened the need to quickly rebuild the storm reserve since weather experts are forecasting the potential for very active hurricane seasons in the years ahead.

In February 2005, the Florida Public Service Commission ("FPSC") allowed FP&L to implement a surcharge on customer bills to collect the deficit resulting from the 2004 storm season over approximately three years.

The ratio for year-end 2005 has not yet been published by Standard and Poor's.

In mid 2005, the Florida Legislature passed legislation that grants the FPSC the authority to approve requests by Florida utilities to issue bonds as an option to pay for costs prudently incurred in hurricane restoration and replenishment of storm reserves. This process is called securitization. Under a securitization plan, FP&L would issue bonds in the financial markets and use the proceeds to recover previously incurred restoration costs and replenish its storm reserve.

FP&L has filed a petition with the FPSC requesting approval to issue \$1.05 billion in storm-recovery bonds. The proceeds of the bond issuance would: (1) pay off the remaining deficit from the 2004 storm season, (2) recover more than \$800 million of storm restoration costs incurred in 2005, and (3) rebuild the reserve to approximately \$650 million for future use. If approved, FP&L would discontinue the current Storm Restoration Surcharge of \$1.65 for a typical 1,000 kilowatt-hour residential monthly bill and replace it with a Storm Charge of approximately \$1.58 for a typical 1,000 kilowatt-hour residential monthly bill designed to pay principal and interest on the bonds over a twelve-year period. The actual surcharge will be based on market conditions at the time the bonds are issued.

Alternatively, if the FPSC does not approve the issuance of storm-recovery bonds, FP&L has requested that the current Storm Restoration Surcharge remain in place and an additional surcharge be authorized to recover the costs from the 2005 storm season as well as to replenish the storm reserve to \$650 million over a three year period.

1. Update on Acquisition of Duane Arnold Energy Center

In the Revised Affidavit of Moray Dewhurst submitted in Docket No. 2005-1, FPLE Seabrook reported on FPL Energy, LLC's then proposed acquisition of the Duane Arnold Energy Center and Mr. Dewhurst's belief that the acquisition would be immediately accretive to earnings and, accordingly, have no adverse impact on the funding assurances for the Seabrook

Plant provided by FPL Group. See Revised Affidavit of M. Dewhurst, ¶11. Those views remain the same as of the date of this filing.

On January 27, 2006, FPL Energy Duane Arnold, LLC ("FPLE DAEC"), closed on its acquisition of a 70 percent interest in the Duane Arnold Energy Center ("DAEC"), a 598-megawatt nuclear power plant located about 15 miles northwest of Cedar Rapids, Iowa, from Interstate Power and Light ("IP&L") a subsidiary of Alliant Energy Corp. FPLE DAEC purchased IP&L's 70 percent interest in DAEC for \$373 million, including nuclear fuel, inventory and other items. Central Iowa Power Cooperative and Corn Belt Power Cooperative currently own 20 percent and 10 percent, respectively, of DAEC. FPLE DAEC is utilizing the experience of the DAEC team, as well as the experience gained operating Seabrook and the expertise of the FPL Group nuclear team to manage and operate the plant. FPLE DAEC is responsible for the ultimate decommissioning of the facility.

FPL Group fully expects this transaction to enhance the Company's financial strength. All of the power from FPLE DAEC's share of DAEC will be sold under a long-term contract to IP&L at a price of approximately \$46 per MWh in 2006, escalating to approximately \$61 per MWh in 2013. The company expects the transaction to be immediately accretive to earnings per share, contributing \$0.03 to \$0.04 per share in 2006 and average accretion of about \$0.04 per share through 2009. FPLE DAEC is scheduled to file for a license extension for the plant in 2009, which, if approved, will enable the plant to continue to operate for an additional 20 years beyond its current license period of 2014.

FPLE DAEC acquired all of IP&L's qualified, and a majority of non-qualified, decommissioning funds at a value of \$186 Million. These funds are held in external trust funds

segregated from FPLE DAEC assets and outside its administrative control. Investment of the funds will be managed in accordance with applicable NRC requirements.

The NRC-required decommissioning funding amount for DAEC is \$436.6 million, as calculated in accordance with 10 CFR § 50.75(c), NRC Regulatory Guide 1.159, and NUREG-1307, Rev. 11. FPLE DAEC's 70% share of this required amount is \$305.6 million. When 2% real earnings are credited through license expiration in 2014, as permitted by NRC regulations (10 CFR § 50.75 (e)(1)(i)), the amount required to satisfy the prepayment method of funding is \$260.1 million. Accordingly, FPL Group Capital has provided a parent guaranty in the amount of \$75 million, representing the difference between the estimated value of the decommissioning funds at transferred closing (\$186 million) and FPLE DAEC's share of the prepayment amount required by NRC regulations when 2 percent real earnings are credited (\$260.1 million). The amount of the parent guaranty does not affect either FPL Group Capital's or FPL Group's ability to guarantee the decommissioning obligations of FPL Energy Seabrook.

2. FPL Group's Planned Merger with Constellation Energy

On December 19, 2005, FPL Group and Constellation Energy announced a proposed merger. Under the terms of the merger agreement, FPL Group will merge with a newly created subsidiary of Constellation Energy, thus becoming a wholly-owned subsidiary of Constellation Energy after the merger.

Under the merger agreement, each common share of Constellation Energy stock outstanding immediately prior to the merger will be converted into 1.444 common shares of Constellation Energy stock at the time of the merger, and each common share of FPL Group

stock outstanding immediately prior to the merger will be converted into one share of Constellation Energy stock at the time of the merger. Based on the number of common shares currently outstanding, FPL Group shareholders will own approximately 60 percent of the common equity of the combined company, and Constellation Energy shareholders will own approximately 40 percent. Constellation Energy will be the parent holding company, with FPL Group becoming a direct, wholly-owned subsidiary of Constellation Energy. After the merger, Constellation Energy's Board of Directors will consist of 15 members; 9 members designated by FPL Group and 6 members designated by Constellation.

The proposed merger involves no planned change to the management, organization or technical personnel of FPLE Seabrook responsible for operating Seabrook Station. Therefore, the technical qualifications of FPLE Seabrook to carry out its responsibilities to safely operate Seabrook Station will remain unchanged and will not be adversely affected by the proposed merger.

The proposed merger will also not change the financial ability of FPLE Seabrook to operate and maintain Seabrook Station. The transaction will create a company with a market capitalization of approximately \$28 billion (based on current market values at December 16, 2005, when the proposed merger was announced), combined annual revenues of \$27 billion (for the twelve months ended September 30, 2005), and \$57 billion in combined total assets (as of September 30, 2005). The merged company's subsidiaries will have approximately 21,750 employees and will serve more than 5.5 million electric customers in Florida and Maryland, and 625,000 gas customers in Maryland. Its competitive wholesale and retail businesses will serve thousands of commercial, industrial and utility customers, including 72 Fortune 100 companies. Its generation portfolio will be the nation's largest, exceeding 45,000 megawatts of capacity.

Through its subsidiaries, it will be the third largest nuclear plant operator in the United States, owning and operating seven nuclear power stations with eleven units.

The merger will not affect decommissioning funding for Seabrook Station. At the closing of the merger, FPL Group Capital and FPL Group will continue to provide financial assurance for FPLE Seabrook's share of its obligation to decommission Seabrook Station.

Overall, FPL Group remains fully capable of, and committed to, standing behind its support obligations to FPLE Seabrook. Since acquiring Seabrook, the Company's financial position has remained secure and has continued to strengthen.

IV. Radioactive Waste Disposal

A. Low Level Radioactive Waste Disposal Plan - No Changes

There have been no appreciable changes since the 2003 comprehensive update in the process used by Seabrook Station for the disposal of Low Level Radioactive Waste ("LLRW"), including any changes in cost, vendor, or on-site storage, nor does FPLE Seabrook expect any such changes at least in the foreseeable future. As discussed in Docket 2005-1, in light of the Barnwell access restrictions that are scheduled to take effect on July 1, 2008, FPLE Seabrook is taking action to be able to store LLRW on site until such time as other disposal facilities are made available. It is possible that one or more other LLRW facilities may open to fill the void created by the Barnwell restrictions. FPLE Seabrook is taking what it views as a responsible approach, however, and planning as though no alternative disposal site(s) will be immediately available when Seabrook LLRW can no longer be disposed of at Barnwell.

B. High Level Radioactive Waste Disposal

At the time of the last comprehensive update to the projected cost of decommissioning the Seabrook Station in Docket No. 2003-1, the Department of Energy ("DOE") estimated that

the Yucca Mountain facility will begin accepting high level radioactive waste ("HLRW") by 2010. In that same docket, TLG assumed a 5-year delay in the Yucca Mountain opening, to 2015. In the Final Report and Order in Docket No. 2005-1, the Committee recounted its experience in visiting the Yucca Mountain facility site and concerns about the status of the project and potential for delays in completing construction beyond the current deadlines articulated by the DOE. The Committee also posed the following questions that FPLE Seabrook should address in this docket:

Is it still reasonable to make the schedule assumptions for Yucca Mountain described above? If not, what would be reasonable?

Does FPL expect that Yucca Mountain will have the capacity to take receipt of Seabrook Station's spent fuel?

What alternatives to disposal at Yucca Mountain are available to Seabrook Station?

(Final Report and Order, Docket No. 2005-1, p. 6.)

FPLE Seabrook currently stores spent fuel in a spent fuel pool, however, that pool will not have the capacity needed to store the additional HLRW generated by the Plant through its operating life. FPLE Seabrook continues to plan its long-term strategy for the disposal of spent fuel based upon the DOE assuming its responsibility under federal law for the ultimate disposal. Based upon the assumptions from the 2005 submittal, the DOE should begin accepting spent fuel from Seabrook Station in 2025.

With regard to a schedule for the completion of the Yucca Mountain Repository, FPLE Seabrook does not propose to speak for the DOE. However, in testimony provided before the House Energy and Water Appropriations Subcommittee on March 8, 2006, and before the House Energy and Commerce Committee on March 9, 2006, Department of Energy Secretary Samuel Bodman stated that DOE would issue a revised schedule for the Yucca Mountain Repository this summer, including a date for submittal of the repository license application to the NRC. Given

the DOE's anticipated timing for issuing a revised schedule, FPLE Seabrook believes it appropriate to review that revised schedule during the 2007 comprehensive decommissioning cost update.

In addition, as suggested by the second question, there are limits in the capacity of the Yucca Mountain Repository. The DOE is absolutely obligated to take title to and dispose of the spent fuel produced by the Seabrook Plant, however, the DOE is prohibited from allowing the emplacement of more than 70,000 metric tons of spent fuel in the first repository (Yucca Mountain) until such time as a second repository is in operation. Based on the inventory of commercial spent fuel currently in storage, plus the additional amount that will be generated from commercial nuclear reactors, storage of all of Seabrook's spent fuel generated during the lifetime of the plant would require either a second repository or a change in the law that would remove the 70,000 metric ton limit.

Although disposal is by law DOE's responsibility, FPLE Seabrook is aware of the current status of the Yucca Mountain Repository, as well as the current storage limitations, and is developing contingency plans for the temporary storage of HLRW in the event that the Yucca Mountain Repository, or an alternative DOE facility, is not available to accept Seabrook Station's HLRW beginning in 2025.

With respect to alternatives to the Yucca Mountain Repository for the permanent storage of HLRW, FPLE Seabrook evaluated the Private Fuel Storage ("PFS") project proposed for the Goshute Reservation in Utah that was, at the time, being supported by FP&L. Because the project had experienced developmental obstacles, FPL Group, the parent company of FPLE Seabrook, in a letter to Utah Senator Orrin Hatch, informed the Senator that the Company stopped supporting the project in December 2005. Since that time, however, the NRC has

approved issuance of a license for the PFS ISFSI and, accordingly, FP&L is considering whether future support for the PFS alternative is warranted.

FPLE Seabrook also evaluated the Wyoming alternative to PFS, the Owl Creek Energy Project. However, as the NRC license application has yet to be submitted, FPLE Seabrook has not pursued participation in the project at this time.

As the completion of a permanent facility for the storage of HLRW is in a state of flux, FPLE Seabrook has devoted significant time and resources to planning for temporary on-site storage of the HLRW generated by the Plant. More specifically, as discussed in the 2005 review, FPLE Seabrook is planning to construct an Independent Spent Fuel Storage Installation ("ISFSI") at Seabrook Station that, by expansion over time, will be capable of storing 100% of the spent fuel that will be generated by the Plant through 2050, the date the Plant would cease operations assuming the NRC grants approval of a 20-year extension of the Plant's operating license.

As the Committee is aware, FPLE Seabrook had always planned to construct an ISFSI on site for temporary storage of HLRW, so the concept is not new. *See, e.g.*, Docket No. 2003-1 (most recent updated cost to decommission the Seabrook Station contemplated temporary dry cask storage of spent nuclear fuel). In light of the current status of the federal repository under construction, however, FPLE Seabrook has determined that planning for the ISFSI with a potential for expansion will ensure there is alternative storage in the event of further delays in the construction of a federal repository. The planned ISFSI for Seabrook Station will not be a permanent repository, but rather a method to ensure that the spent fuel is placed in a safe configuration until such time as the Federal government accomplishes the permanent disposal of the spent fuel.

To the extent practical, the ISFSI site will be designed and constructed to accommodate loading any of the three commercially-available dry cask systems, including the TransNuclear NUHOMS HD (NRC Docket Number 72-1030) with the 32PTH canister and the HSM-H concrete storage module. This universal ISFSI design approach will ensure that Seabrook Station benefits from a competitive dry cask storage market in the future.

In 2005, the TransNuclear dry cask storage system was selected to meet the near-term storage requirements of Seabrook Station. TransNuclear's dry cask storage system was selected for its simplicity of design and operations, its advanced performance capabilities, and its capacity to store 32 used fuel assemblies. A commercial commitment for supply of eight dry cask systems to FPLE Seabrook was made in the initial order. This was a joint FP&L/FPLE procurement to benefit from the fleetwide economies of scale available to the combined resources of FP&L/FPLE.

System loading is started by placing a canister into a reusable transfer cask that provides support, protection, and radiation shielding functions. The transfer cask is then placed vertically into the spent fuel pool and 32 fuel assemblies are placed into the canister. A temporary lid is placed on the canister before the system is moved to a separate preparation area where the cask is drained, welded, backfilled with an inert gas, and sealed. When ready, the transfer cask is lifted onto a transport trailer and lowered to a horizontal configuration. The transport trailer is then towed to the ISFSI site and backed up to the NUHOMS storage module and the canister is aligned and slid from the transfer cask into its storage location, and a shield lid is placed to secure the vault.

The NUHOMS storage module is entirely passive. Heat generated by the spent fuel assemblies inside the canister will be conducted to the outer shell of the canister. That heat is

removed by heat entering passages in the bottom of the module and exiting out the top of the module by a chimney effect. In addition to removing the fuel's heat, the concrete module also provides radiation shielding for the safety of the plant workers and the public.

In its final storage configuration, a single NUHOMS storage module is approximately 21 feet long, 10 feet wide, and stands about 19 feet tall. Modules are placed side by side to form arrays over the length of the ISFSI pad. One array may be placed against the back of an adjacent array, but sufficient room must be left on the ISFSI pad for the transfer cask to mate to the front of any module. The TransNuclear system and the ISFSI pad are seismically qualified and designed to withstand the same design basis earthquake as is the Seabrook Station design, i.e., a 0.3 g horizontal ground acceleration vector and a 0.2 g vertical ground acceleration vector. In addition, the TransNuclear System is designed to withstand a design-basis tornado and the impact of missiles (e.g., debris) generated by tomado-force winds. Although not part of the design basis, TransNuclear has advised FPLE Seabrook that the TransNuclear System will survive the impact of a 767 airliner and the resultant fuel fire. The TransNuclear system has a design life of 100 years, however, the casks are licensed for a 20-year period starting from the time of the NRC's issuance of the Certificate of Compliance ("CoC"). FPLE Seabrook expects that the purchased cask system will receive its CoC in 2006. Before termination of the first 20year license period, the CoC will be subject to renewal by the NRC.

FPLE Seabrook is continuing the evaluation of sites at Seabrook Station for the ISFSI that will meet all the requisite safety and security requirements. Preliminary soil analysis and other evaluations have been initiated using industry experience as a benchmark. FPLE Seabrook expects to build the concrete pads in phases, as needed. Cask loading may start as early as 2008

because the spent fuel pool will be approaching its capacity in 2009. The initial loading campaign is expected to involve six canisters.

Although the module will soon be licensed for storage only, the 32PTH canister is also designed for transportation. When the canister's transportation license is complete and a repository becomes available, a canister may be withdrawn from the storage module back into the transfer cask and ultimately, into a certified transportation cask.

FP&L is following a similar strategy with its nuclear units located in Florida and, accordingly, FPLE Seabrook will benefit from the experience the FP&L nuclear group obtains as the ISFSI's are constructed and spent fuel is deposited for storage. In addition, FPLE Seabrook will incorporate the lessons learned from FPLE Duane Arnold 's experience in constructing an ISFSI at the site in Iowa.

FPLE Seabrook appreciates and agrees with the Committee's sentiment expressed in the Final Report and Order in Docket No. 2005-1 that increasing public awareness is helpful to avoid misperceptions about anticipated decommissioning activities. *Id.*, p. 7. FPLE Seabrook has established a tradition of fostering open and honest communications with the public, the media, community leaders, and elected officials and is very mindful of the importance of keeping key external stakeholders informed of the Dry Storage Project.

To that end, a comprehensive Dry Storage Communications Plan has been prepared that ensures local, state, and federal stakeholders are briefed on the specifics of Dry Storage at Seabrook Station, and kept informed of progress. Consistent with this plan, initial communications with key stakeholders were made early in 2005. The communication plan calls for continued, on-going communications as details of the project are solidified. The initial communications were with local and State officials and discussed the ISFSI in generic terms as

the details regarding the location of the ISFSI pad and the system vendor were not finalized. Future communications will include briefings to officials from the Town of Seabrook, and other local officials and elected legislators in the New Hampshire House and Senate to discuss elements of the ISFSI, such as the purpose and location. As an example, New Hampshire State Senator Maggie Wood Hassan, whose district includes Seabrook, made a visit to Seabrook Station on February 10, 2006 and during the course of her visit was provided with a briefing on the ISFSI.

Members of the news media routinely covering Seabrook Station have received two briefings on the general plans for Dry Storage. The FPLE Seabrook spokesperson has responded to inquiries from the news media about the project, and will continue to do so. FPLE Seabrook anticipates inviting the news media to do feature stories on the construction activities, following the successful model used at the FPLE DAEC nuclear plant in Iowa.

FPLE Seabrook will continue to use the Communications Plan to ensure that stakeholders are kept informed throughout the project. Throughout the years, FPLE Seabrook has built a well-deserved reputation for its openness when communicating Plant issues and projects, and that commitment continues with Dry Storage implementation.

V. Cost to Decommission the Plant – No Changes

The recapture of the approximately three-and-one-third years that were spent under the zero-power and low-power operating licenses extends the Seabrook Station operating license to March 15, 2030. This extension will have a positive effect on the cost to decommission the Plant because, while increasing the operating life will generate a greater amount of spent fuel and correspondingly increase the number of dry casks needed for the temporary storage of the fuel,

the extension means that more of these costs will be incurred while the Plant is still operating, so they will be treated as operations and maintenance, rather than decommissioning, costs.

More specifically, FPLE Seabrook estimated the effect of the extension of the operating license based upon the comprehensive decommissioning estimate conducted in the 2003 docket. The estimate includes the increased costs for disposal of additional fuel assemblies required as a result of the 2005 power uprate and the power uprate planned for 2006. Based on that estimate, the decommissioning cost would be reduced by \$10.7 million, in 2003 dollars. As reflected below, the extension of the operating license will allow an additional 8 casks to be shipped as operating expenses, which will reduce the ISFSI operating period by two years and reduce cask processing costs, thereby reducing the costs that must be paid out of the Decommissioning Trust Fund.

Comparison

Assumption	2026	2030
Date of License Termination	October 17, 2026	March 15, 2030
Core Load	84 assemblies through C11 80 assemblies C12 through C24	84 assemblies through C10 88 in C11 84 assemblies C12 through C27
Total Discharge	2025 Assemblies	2333 Assemblies
Year of First Shipment	2025	2025
Total Number of Casks	64	73
Number of Casks shipped prior to License Termination	4	12
Years Encompassed by Decommissioning	21 (2026-2046)	19 (2030-2048)

The above estimate of the effects of the zero power license recapture is based upon the decommissioning cost estimate provided in Docket 2003-1, which includes the Department of Energy's 2010 date for the commencement of operation at the Yucca Mountain facility, with the

Committee's additional five-year cushion assuming commencement is delayed until 2015. Should there be a delay in the initiation of operation of the Yucca Mountain facility, the ability to transfer casks as an operating activity versus a decommissioning activity could potentially be affected. Although such delay would not impact the vast majority of the decommissioning expenses (*i.e.*, those that occur during the prompt dismantling processes), delay in opening a federal repository could result in spent fuel transfer costs and an increase in the duration of storage of spent fuel at the Seabrook site and, as such, minimally increase the spent fuel costs that would be paid from the Decommissioning Trust, rather than by the Plant as an operational expense.

Because the extended operating license will have a minimal impact on the cost to decommission, and because it is unclear whether that impact will be positive or negative, the funding schedules that are proposed for approval (Attachment D) maintain the decommissioning estimate as approved by the Committee in prior proceedings, escalated to March, 2030 at the rate approved by the Committee.

VI. FPLE Seabrook Analysis of 2005 Energy Act

There were two issues under the 2005 Energy Act that were potentially applicable to the Seabrook Station, both of which created some flexibility in a nuclear plant owner's ability to contribute dollars to qualified decommissioning trusts beginning in January, 2006. More specifically, as the Committee is aware, the Joint Owners make contributions into either qualified or non-qualified trust fund accounts. The major difference between the accounts is in the tax treatment of the two types of contributions; the contributing joint owner is entitled to take a tax deduction for contributions made to a qualified trust account, but is not entitled to such deduction for non-qualified contributions, and earnings on qualified accounts are taxed to the

Trust (and at the Trust tax rate), whereas earnings on non-qualified accounts are taxable income to the applicable Joint Owner.

Prior to the enactment of the 2005 Energy Act, unregulated, "merchant" nuclear plant owners, like FPLE Seabrook, were prohibited from making decommissioning contributions to qualified decommissioning trust fund accounts. As FPLE Seabrook reported in the Stipulation filed as part of the record in NDFC Docket No. 2005-1, Section 1310 of the Energy Policy Act of 2005 permits a nuclear power plant owner in an unregulated environment to contribute funds to the qualified Decommissioning Trust after January 1, 2006. This provision also permits certain taxpayers to change the tax treatment of non-qualified decommissioning funds by allowing a "pour over" of the non-qualified Decommissioning Trust into the qualified Decommissioning Trust. Thus, two questions emanate from the Act: (1) Can FPLE Seabrook "pour over" a portion of the amounts in its existing non-qualified accounts and obtain the more favorable tax treatment accorded to qualified accounts? (2) Can FPLE Seabrook make contributions to qualified accounts going forward? Each is discussed in turn.

The Energy Act allows for pour over of funds from non-qualified to qualified accounts only for those nuclear plants that were placed in service prior to 1984. Because the Seabrook Station was placed in service in 1990, FPLE Seabrook has concluded that it cannot use this provision to pour over dollars from its non-qualified accounts to qualified accounts.

FPLE Seabrook believes that the Energy Act would allow FPLE Seabrook to make contributions to qualified trust accounts on a going forward basis. As discussed earlier, however, approval of a funding date that corresponds to the new license termination of March 15, 2030 means that FPLE Seabrook's decommissioning trust accounts are already significantly overfunded and, as a result, the proposed schedules do not call for further contributions from FPLE

Seabrook. Even without additional contributions, that over-funding promises to grow substantially if the Plant obtains a 20-year license extension, as expected. If at some future point the Committee determines that additional contributions from FPLE Seabrook are necessary, FPLE Seabrook will examine the then-current implications of making those contributions to qualified, versus non-qualified, accounts.

VII. Mechanics of, and Assumptions Underlying, the Approved (Docket 2005-1), and Proposed (Docket 2006-1), Funding Schedules

A. Funding Schedule Approved by the Committee in Docket 2005-1

The Committee performed a comprehensive review in 2003 of the decommissioning cost projections for Seabrook Station. Following that review, the Committee in the Final Order made the following key findings:

- the funding date for the Decommissioning Fund will be 2026, and the projected cost of decommissioning is \$599.7 million (in 2003 dollars);
- the inflation rate and the cost escalation factor for the TLG decommissioning estimate were 3% and 4.5%, respectively;
- the reduced earnings assumptions for the various investment options proposed by Prime Buchholz were appropriate;
- FPLE Seabrook's funding assurances remain adequate; and
- the Seabrook owners were authorized to establish an escrow account as a funding assurance into which 25% of each year's schedule of payments is to be paid. During the next 4-year comprehensive review in 2007 (or earlier by order of the Committee), the escrow will terminate and, based upon certain factors identified in the Final Order and the overall adequacy of the Fund, the Committee will determine whether some or all of the balance in the escrow should be released to the Joint Owners and/or transferred to the Decommissioning Fund.

The Committee found there were no material changes and approved funding schedules with these same base assumptions in Docket No. 2004-1. In Docket No. 2005-1, the Committee maintained the same foundational assumptions, but approved a modification to the investment strategy for the period following permanent cessation of operations at the Plant (the "Tail

Period") that was more consistent with the 20-year period during which the Plant will be decommissioned. In this approved investment strategy, the Joint Owners are required to maintain 50% of each Joint Owner's Fund asset portfolio in cash and cash equivalents, but are permitted to invest the remaining assets in a combination of bonds and equities, up to a maximum of 25% in equities.

B. Mechanics of, and Assumptions Underlying, the Proposed Funding Schedule

Since the Committee's Final Order in Docket No. 2005-1, there have been no material changes that would affect the earnings, inflation and cost escalation assumptions embedded in the Committee-approved funding schedules and, accordingly, FPLE Seabrook proposes no changes to those key assumptions. The inflation and cost escalation factor assumptions remain at 3% and 4.5%, respectively, and Prime Buchholz has recommended no changes to the earnings assumptions approved by the Committee in the Final Order in Docket No. 2005-1, with the exception of a slight adjustment to reflect the addition of small and mid cap and international investments. The identity of the Investment Consultant and Fund manager also remain unchanged.

As the NDFC is aware, the Trustee for the Fund has changed. Effective January 3, 2006, the Trustee changed from Citizens Bank to Mellon Trust of Delaware. Consistent with this change, the custodian for the funding assurance escrow accounts will be changed to Mellon.

Although other fundamental assumptions remain unchanged, as indicated above, FPLE Seabrook did receive approval from the NRC of recapture of the pre-operation license period that extended the Plant's operating license to March 15, 2030. The proposed schedule developed by Prime Buchholz (Attachment D) is based on FPLE Seabrook's request that the Committee revise the funding date for decommissioning funding to correspond to the revised operating license period, which now extends to March 15, 2030. This schedule reflects that FPLE Seabrook's

decommissioning accounts are significantly over-funded to meet its decommissioning obligations, but contributions from MMWEC, Taunton and Hudson are still required for each of those Joint Owners to meet their respective 2030 targets.

Consistent with prior NDFC orders, 75% of the 2007 contributions are to be paid into the Fund and 25% paid into the funding assurance escrow accounts. As envisioned by the Committee, this financial plan serves the primary purpose of ensuring that there will be adequate funds for decommissioning when needed, while guarding against the potential for the unnecessary and economically inefficient over-funding of the Decommissioning Fund.

The potential for over-funding now that the Plant's operating license has been extended to 2030 for recapture of the low power testing period, at least for FPLE Seabrook, has become a reality. FPLE Seabrook appreciates the Committee's foresight in permitting alternative funding assurances through the funding assurance escrow, rather than requiring larger contributions to the Decommissioning Fund and the corresponding loss of those contributed dollars until the end of the decommissioning period. The likelihood of even more significant over-funding, and for all of the Joint Owners, is also more probable given FPLE Seabrook's plans to file with the NRC for a 20-year license extension in or around 2010. In that event, even with no further contributions by any of the Joint Owners, the additional 20 years of earnings power on the Fund accounts would likely yield over-funding in the billions (rather than hundreds of millions) of dollars.

The total fund grew by \$17.6 million in 2005, ending the year with a balance of \$339.5 million. The growth came from \$6.7 million in contributions and \$12.1 million in investment earnings less current expenses (including deferred taxes) of \$1.2 million. The details of the

performance of the Fund are set forth in the attached analysis from Prime Buchholz, Attachment A.

The Fund balance for year-end 2005 was \$6.6 million lower than the balance expected in the funding schedules approved in Docket No. 2004-1, and \$1.6 lower than the Fund balance projected most recently in the funding schedules approved by the Committee in Docket No. 2005-1:

Actual Fund Market Values at 12/31/2005 (Audited)\$339.5 million

Under the current approved schedule, the Joint Owners will make contributions to the Fund of \$2.6 million over the course of 2006. The year-end targeted balance under the Committee-approved funding schedules is approximately \$368 million. *See* Docket No. 2005-1, Order No. 2. Prime Buchholz currently estimate that, using the approved schedule of payments, the 2006 year-end Fund balance will be approximately \$371 million. As contemplated, the funding schedules proposed in this Application are designed to achieve the targeted funding balance by 2030, but would be re-set and resubmitted to the Committee in December, 2006 to include the November 30, 2006 Fund balance, plus anticipated Fund earnings, minus Fund expenses, plus the funding assurance escrow balance, plus the anticipated December contribution, plus anticipated earnings, minus expenses.

VIII. Proposed Funding Schedule and Funding Assurance Escrow.

A. The Proposed Funding Schedule

The funding schedules proposed to achieve full funding by the 2030 funding date are set forth in Attachment D and result in \$529,460 into the Fund and \$176,487 to the funding assurance escrow accounts for 2007. With the exception of moving to the 2030 funding date, the schedules were prepared following the methodology that was approved by the Committee in the Final Order in Docket No. 2005-1:

- a) The estimated cost of decommissioning Seabrook Station Unit 1, and the related expenditure schedule, in 2007 dollars is derived from the Committee-approved estimates, but based on decommissioning commencing in 2030.
- b) A decommissioning cost escalation factor of 4.5% is applied to the cost estimate to determine the total cost of decommissioning to the end of the decommissioning period.
- c) The projected decommissioning cost and liability is allocated to the Joint Owners based upon their respective ownership share. A separate Schedule of Payments for each Joint Owner is then created. Each Joint Owner is responsible for its ownership share of the total cost.
- d) Actual market values of investments within each fund for each Joint Owner are compared to the Fund's target balances. The difference between actual values and the targeted balances is factored into future funding contribution calculations.
- e) Individual Joint Owners elect investments from the available approved investment funds. Future earnings assumptions for each fund, estimated by the Investment Consultant, are applied to Fund balances.
- f) Estimated taxes and expenses for necessary administrative activities of the trust are deducted from Fund balances. Such expenses include Trustee and Fund Manager fees, Investment Consultant billings, audit fees and routine administrative expenses of the Committee. Taxes are only paid out of the Qualified Trust funds.
- g) The appropriate funding methodology and inflation estimates are applied. Contributions are escalated annually by the overall rate of inflation for the service life of the plant.
- h) Through 2007, 75% of computed contributions are placed in the Decommissioning Fund. The remaining 25% are deposited into one of two funding assurance escrow accounts.
- i) The funding assurance escrow accounts grow by both future contributions and earnings, less estimated expenses.

The Prime Buchholz analysis follows the same methodology as in the past. Prime Buchholz is not recommending any change to the earnings and inflation assumptions, with the exception of a slight increase in the stock fund assumptions based on the addition to those fund portfolios of small-cap, mid-cap, and international stock investments. The move to include these additional investments within the investment options was the result of asset/liability modeling by Prime Buchholz. See Prime Buchholz Report, Attachment A, p.6 ("Based on extensive asset/liability modeling performed for the Joint Owners, it became clear that diversifying the equity funds into small to mid capitalization stocks and international stocks could improve long term returns, reduce risk, and provide a higher probability that the trust will be fully funded at shutdown."). The details of Prime Buchholz analysis are set forth in Attachment A.

The following table, reproduced from the Prime Buchholz analysis, reflects the current assumptions:

Current Assumptions

_		Current As	sumptions
Fund	Investments	Nominal	Real*
1A	Taxable Bonds	6.0%	3.0%
1B	Diversified Stocks	9.8	6.8
1C	Cash/Short-Term	3.5	0.5
2	Taxable Bonds	6.0	3.0
3	Tax-Exempt Bonds	4.8	1.8
4	Cash/Short-Term	3.5	0.5
5	Diversified Stocks	9.8	6.8
6	Diversified Stocks	9.8	6.8
Inflation		3.0	

¹ real return = nominal return - inflation

Likewise, Prime Buchholz is not recommending any changes to the earnings assumptions for the two escrow accounts.

B. Funding Assurance Escrow Accounts

The Joint Owners timely paid their respective contributions to the funding assurance escrow for calendar year 2005; contributions to the escrow for 2006 will begin in October, 2006. Although the dollar payments from the Joint Owners during calendar year 2005 were correct, in December, 2005, FPLE Seabrook informed the Committee that the former Trustee, Citizens Bank, had made certain errors in depositing those contributions. In certain circumstances, contributions intended for the escrow accounts were erroneously deposited into the Decommissioning Fund and vice versa. In addition to informing the Committee of these errors, FPLE Seabrook also informed the NRC and requested permission from the NDFC to direct Mellon Trust, the new Custodian and Trustee for both the Decommissioning Trust and funding assurance escrow, to correct those errors that had not yet been corrected by Citizens.

FPLE Seabrook requested authorization from the NDFC to correct these deposit errors and the funding schedules and escrow schedules proposed herein assume those corrections have been made effective February 28, 2006 (see Attachments D and E). The year-end 2005 escrow balance is approximately \$4.1 million and, with the correction of the erroneous deposits from 2005 (approximately \$800,000), \$3.4 million in scheduled contributions for 2006, plus earnings and less projected expenses, the escrow balance is projected to reach \$8.6 million by year-end 2006.

As indicated above, the Seabrook Station, both operationally and financially, has performed at or above expectations and the Fund continues to grow substantially each year. Notwithstanding that expectations have been met or exceeded, the escrow funds remain available should the Committee determine that the Decommissioning Fund is insufficiently funded.

C. Funding Data Comparisons: Current Schedule versus Proposed

For purposes of providing the Committee with a summary of the status of the Fund and escrow accounts, and a comparison of how that status compares to prior projections, below is a chart reflecting the current projections in comparison to those approved in the 2005-1 docket:

COMPARISON OF NDFC DOCKET 2005-1 PROJECTIONS WITH CURRENT PROJECTIONS (DOCKET 2006-1) (\$000,000)

	2005	2006	2007	2015	2026	2030
1 Projected balance from last NDFC approved schedule of payments	341.1	368.1	398.3	752.9	1652.0	N/A
Actual balance/ current projected balance	339.5	371	400.1	738.1	1718.7	2187.8
Difference (2-1)	(1.6)	3.1	1.8	(14.8)	66.7	N/A
4Projected cost of decommissioning, from last NDFC approved schedule of payments	669.5	699.7	731.2	1039.8	1659.4	1978.9 ¹
Projected fund balance as % of projected cost of decommissioning, from last NDFC approved schedule of payments (1 / 4)	50.9%	52.6%	54.5%	72.4%	99.6%	N/A
Current/projected balance as % of projected cost of decommissioning (2 / 4)	50.7%	53%	54.7%	71.0%	101.8%	110.6%
7 Funding Assurance Escrow (current/projected)	4.1	8.6	9.0	N/A	N/A	N/A
8 Projected Funding Assurance Escrow, from NDFC Docket 2005-1	4.9	8.6	12.3	N/A	N/A	N/A
9 Difference (7-8)	$(0.8)^2$	0	(3.3)	N/A	N/A	N/A
	1	l		<u> </u>	!	

Note 1: The projected cost of decommissioning as of the current end of the Plant's operating life (March, 2030) is derived by escalating the Committee-approved decommissioning estimate by the approved escalation factor.

Note 2: This difference resulted from contributions that should be have been made to the escrow accounts, but were erroneously deposited in the Decommissioning Trust Fund.

The remaining differences reflected in this table result from the change in the funding date to March, 2030 to correspond to the NRC-approved license life for Seabrook Station.

IX. Conclusion

For the reasons set forth herein, FPLE Seabrook respectfully requests that the Committee approve the proposed funding schedules for the Joint Owners.

Respectfully submitted this 31st day of March, 2006.

REPORT OF THE REVIEW OF FUNDING SCHEDULE AND INVESTMENT ASSUMPTIONS AND THE PROPOSED FUNDING SCHEDULE BY PRIME, BUCHHOLZ & ASSOCIATES, INC.

Seabrook Station Nuclear Decommissioning Financing Fund

Review of Funding Schedule and Investment Assumptions

March 2006

Ramelle M. Hieronymus Prime, Buchholz & Associates, Inc. 25 Chestnut Street Portsmouth, NH 03801 603-433-1143 As required in the Seabrook Nuclear Decommissioning Financing Fund Master Trust Agreement, Prime, Buchholz & Associates (PB&A) has been retained as an independent consultant to develop a funding schedule for the Seabrook Nuclear Decommissioning Trust. The funding schedule utilizes assumptions for inflation and investment earnings, also developed by PB&A, as well as estimates of decommissioning costs and cost escalation, developed by other parties. This report presents PB&A's analysis of the investment assumptions and documents changes made to the funding schedule. Assumptions regarding decommissioning costs and cost escalation rates are reviewed in a separate document. An updated funding schedule is attached.

Investment Alternatives

In past years the Seabrook Joint Owners have had the option to direct their decommissioning investments into any of five investment funds (Funds 1A, 1B, 2, 3, and 5). This year a new fund (Fund 6) is being added to provide the municipal owners with an equity option that does not consider taxes as part of its investment strategy. In addition, it is being proposed that Funds 1B and 5, along with the new Fund 6, offer a more diversified equity option than in the past. The structure will be discussed in more detail later in this report. The fund options are summarized in the following table:

TTC .		614	4
1 ru	ST	Stru	ıcture

Trust	Fund	Asset Class	Investments ¹	Tax Sensitivity
þ	1 A	Fixed Income	Government, corporate and municipal bonds	Yes
Qualified	1B	Core Equities ²	Domestic large, mid/small capitalization and international stocks	Yes
Õ	1C	Cash	Liquid short-term investments, utilized only during decommissioning	Yes
	2	Fixed Income	Government and corporate bonds	No
fied	3	Fixed Income	Municipal bonds	Yes
Quali	4	Cash	Liquid short-term investments, utilized only during decommissioning	No
Non-Qualified	5	Core Equities ²	Domestic large, mid/small capitalization and international stocks	Yes
	6	Core Equities ²	Domestic large, mid/small capitalization and international stocks	No

¹ These investments are more fully discussed in the Investment Guidelines for the Seabrook Station Nuclear Decommissioning Financing Fund (Investment Guidelines).

The Joint Owners do not utilize the two cash funds (Funds 1C and 4) as part of their predecommissioning investment strategies. However once decommissioning commences, they are required to hold 75% of their investments in bonds and cash to ensure adequate liquidity to pay

² Currently subject to a 70% maximum allocation at the total trust level

decommissioning expenses. Five years prior to shutdown they will begin liquidating equity investments and moving the proceeds to bond and cash investments.

All of the investments in the qualified trust are managed with a sensitivity to taxes because by law qualified nuclear decommissioning trusts are subject to a 20% tax rate. Earnings on non-qualified funds flow through to the owner and in the case of corporations are taxed at the corporate federal tax rate of 35% plus any applicable state tax. Because of these differing tax rates, the three municipal owners only invest in non-qualified funds because of their tax-exempt status. The sole taxable owner has investments in both qualified and non-qualified funds. The funding model assumes a 0% rate on the non-qualified funds because it has been the practice of the taxable owner not to withdraw tax payments from the trust.

The Joint Owners decide annually how their contributions for the upcoming year will be invested among the six funds. With the 2002 update of the Investment Guidelines, approved by the State Treasurer, each Joint Owner may move up to 20% of their total fund assets among the funds annually in order to rebalance individual investment portfolios in accordance with good financial management practices. The State Treasurer must still approve any reallocations in excess of the 20% limit.

Current Status

The following table summarizes the year-end 2005 audited trust balances and approved 2006 contributions by fund:

Fund	Investments	Year-End Baland		2006 Contri	butions**
		(\$Millions)	(%)	(\$Millions)	(%)
1A	Fixed Income	\$88.7	26.1	\$0.0	0.0
1B	Core Equities	43.0	12.7	0.0	0.0
2	Fixed Income	46.1	13.6	0.3	10.2
3	Fixed Income	15.1	4.4	0.0	0.0
5	Core Equities	146.6	43.2	2.3	89.8
	Total	\$339.5	100.0	\$2.6	100.0

Trust Balances and 2006 Contributions

The total fund grew by \$17.6 million in 2005, ending the year with a balance of \$339.5 million. The growth came from \$6.7 million in contributions and \$12.1 million in investment earnings less current expenses (including deferred taxes) of \$1.2 million. As of December 2005 the fund was \$6.6 million behind the \$346.1 million balance projected in the approved funding schedule for 2005 (Exhibit 1) and \$1.6 million lower than the \$341.1 million year-end 2005 balance projected in the funding schedules approved for contributions starting January 1, 2006.

^{*} Based on Howe, Riley and Howe audited numbers

^{**} Contributions to the trust only; does not include escrow contributions

This underperformance is not cause for concern. We do not anticipate that the fund will match the projections in every year. Last year, for example, the fund was \$9.3 million ahead of the projected balance. When underperformance does occur, the following year's contributions are higher, all else being equal, in order to amortize the shortfall over the remaining life of the unit.

The underperformance relative to projections was due to the fact that investment returns in 2005 were relatively muted. Large capitalization stocks, as measured by the S&P 500, gained 4.9% for the year. Mid-sized companies did better with the mid-cap sector producing over 12% returns. International stocks bested domestic issues, producing over 13% gains for large developed markets despite a very strong dollar. Seabrook currently has exposure only to large cap domestic stocks, although as discussed later, we propose that mid to small cap and international holdings should be included in the portfolios in the future. The return on Seabrook's two equity funds (Funds 1B and 5) mirrored the return on the S&P 500, the index fund in which they are invested.

On the bond front, the Federal Reserve Open Market Committee raised the fed funds rate eight times in 2005, closing the year up 2% at 4.25%. As happened last year, these moves had little effect on the long end of the yield curve so by year-end the curve was basically flat. In this environment the Lehman Brothers Government/Credit Index gained 2.4%, lagging inflation by 1%. Funds 1A and 2, Seabrook's two taxable bond funds, had pre-tax returns in line with this benchmark. The municipal bond fund (Fund 3) returned 2.1% for the year, slightly ahead of its benchmark index.

Overall, the total trust was up 3.7% on a pre-tax basis and 3.4% after-taxes. The year-end asset allocation of the fund was 56% stocks and 44% bonds, with the allocation changing only modestly over the year. The allocation to stocks is anticipated to grow over the upcoming year as all Joint Owners have either approved or are considering increases in their equity allocations.

Contributions to the trust fund for 2006 will total \$2.6 million, with an additional \$3.4 million being placed in the escrow accounts as approved in the Order No. 2 of the NDFC dated December 22, 2005 in Docket No. 2005-1 ("2005-1 Order"). Unlike last year, almost 90% of these contributions will go into the equity funds as the Joint Owners work to increase their equity allocations. As contributions are now relatively small compared to the assets in the trust, these contributions alone are expected to have only a modest impact on the trust's asset allocation.

All current contributions are going into the non-qualified funds. The three tax-exempt joint owners make non-qualified contributions because investing in the qualified fund would subject them to a 20% tax rate on earnings. Until recently, under current tax law FPLE Seabrook could not make qualified contributions because it is a non-regulated owner.

The Seabrook Funding Model

The Seabrook Funding Model is designed to compute the necessary contributions to the trust so that there will be sufficient funds to decommission the facility when those costs are incurred over the 20-year decommissioning period, now scheduled to begin in March 2030. On December 28, 2005, Seabrook Station received NRC approval of its request to extend the operating license of the

plant to recapture the approximately three and one half years from the time the license was granted until Seabrook began actual operation.

The Seabrook model is iterative in form. It begins with an approximated initial contribution amount for year one and then computes expected earnings and expenses for that year and finally the year-end balance. It cycles through each year of the simulation (up to the last decommissioning payment in 2050), increasing contributions each year by the consumer price inflation rate (3%). At the end it checks to see if there is a zero balance in the fund; if not, it uses a new approximated initial contribution and repeats the computations until the balance at the end of 2050 is greater than or equal to zero. A zero balance means that the amounts contributed to the trust fund plus earnings equals the amount of all expenses over the life of the fund, including all decommissioning expenses. A balance greater than zero means that the amount currently in the trust of the applicable owner is, together with earnings, greater than the amount of all expenses over the life of the fund, including all decommissioning expenses (i.e., that joint owner's portion of the trust is over-funded relative to the projected expenses applicable to that joint owner). These calculations are performed for each joint owner and then aggregated for the total fund.

In making its computations, the model utilizes a number of inputs from various sources. Some of these are known factual items such as current account balances while others are, of necessity, estimates such as the decommissioning cost estimate that is approved by the NDFC.

Major Factual Input Variables

Asset balances by owner and fund: These come from the most recently available accounting data.

Direction of new contributions: Each joint owner makes an annual determination of where they would like their contributions invested.

Target Asset Allocation: Each joint owner can specify a desired mix of stocks and bonds with the option to either reallocate immediately to that target or to direct contributions in such a way as to achieve that allocation over time. Once the target allocation is reached, the model simulates the movement of money among the funds annually to maintain the mix. Different allocations may apply during the unit's operating life and after decommissioning begins.

Tax Rates: A 20% federal tax rate applies to all earnings in the qualified trust. The model assumes that all earnings in a given year are taxed (i.e. no unrealized gains). This is a very conservative assumption. No taxes are charged against the non-qualified funds. Three of the joint owners are tax-exempt entities and the fourth has not chosen to pay taxes out of its non-qualified fund assets.

Major Estimated Input Variables

Decommissioning Cost Estimate: This is based on the TLG Services' periodic studies of the cost to decommission Seabrook. The study includes the total cost in then current dollars as well as the timing of decommissioning expenditures. The current cost estimate is \$699.7 million as of year-end 2006. This represents the most recent TLG estimate escalated at the decommissioning escalation rate (4.5%) to the end of 2006.

Decommissioning Cost Escalation: This measures how the decommissioning costs are expected to grow over time. This rate includes the various component costs to decommission the Seabrook plant such as labor, materials, transportation, and waste disposal. The current estimate for cost escalation is 4.5%, or 1.5% greater than general inflation as measured by the Consumer Price Index (CPI).

Investment Earnings: Prime, Buchholz & Associates is responsible for developing earnings assumptions for each of the eight investment funds. The assumptions are designed to be conservative and long-term in nature, thus there will not be significant changes from year to year. In setting the assumptions PB&A looks at long-term historical returns on market indices representing each fund's allowed investments. Current assumptions are detailed later in this report.

Fund Expenses: In addition to decommissioning expenditures, the fund also pays for ongoing operating expenses such as investment management fees, custody expenses, and audit and legal costs. The model utilizes historic experience as a guide to future levels of these expenses. Overall, administrative costs amount to approximate 0.2% of fund assets.

Starting Fund Balances: Historical fund balances reflected in the funding schedules are audited fund account balances provided by the firm that audits the Seabrook trust fund accounts. Fund balances by owner for the first year of the modeling (in this case year-end 2006) are projected using the most recently available accounting data. Balances as of February 28, 2006 form the starting point for the model included in this report. The accounting balances needed to be adjusted down by approximately \$800,000 this year due to an error at the custodian bank. Citizens improperly deposited some contributions into the trust fund that should have gone into the escrow account. We then estimate year-end balances by adding in scheduled contributions and estimated earnings and netting out expected expenses. The year-end balances also reflect fund transfers that the Joint Owners anticipate making. The approved model will be recomputed in December 2006 to gain a more accurate estimate for 2007 contributions. As directed by the NDFC, this December reset will be calculated using the November trust fund balances, plus anticipated December earnings, minus expenses, and the escrow account balance, with anticipated December escrow contributions and earnings, minus expenses.

Review of Current Investment Return Assumptions

Each year the investment assumptions are reviewed to ensure that they continue to represent reasonable expectations for the future. The review compares the assumptions to the historical returns on market indices. The indices are selected to be representative of each fund's allowed investments, as described in Seabrook's Investment Guidelines. The comparisons emphasize performance over long time periods, consistent with Seabrook's long remaining expected life.

We utilize a building block approach based on "relative risk premia" to develop the investment return assumptions. This expresses returns in the form of two components: inflation (as measured by the CPI) and a "real" return or excess return over and above inflation. These then are combined to compute "nominal", or actual, total return expectations. In developing our inflation assumption, we take into account current inflation trends and the expectations of economic forecasters. This

approach provides a link, through inflation, between the investment returns, contribution increases, and various decommissioning components.

In developing the investment-related assumptions we strive to be conservative. We want assumptions that are more likely to lead to a slight over-funding of the trust than an under-funding. For example, by utilizing conservative earnings assumptions, the model will require higher future contributions to offset the reduced earnings. By being conservative, we hopefully can minimize the impact of any negative "surprises", while benefiting disproportionately from good investment experience.

This year we have developed a new return assumption for the equity funds, reflecting the plan to further diversify the funds. Previously, the assumption (9.5%) was solely for large capitalization domestic stocks, representative of the S&P 500 Index fund in which the equity funds are invested. Based on extensive asset/liability modeling performed for the Joint Owners, it became clear that diversifying the equity funds into small to mid capitalization stocks and international stocks could improve long term returns, reduce risk, and provide a higher probability that the trust will be fully funded at shutdown.

Prime, Buchholz & Associates utilizes historical characteristics as a starting point to develop the inputs for each asset class. Actual assumptions represent forward-looking, long-term estimates using relative risk premia. We consider the longest period for which data exists, as well as rolling period (three-, five, and ten-year) returns. Significant discrete sub-periods, such as the post-World War II period, are also analyzed. We also consider the current interest rate/inflation environment and the level of equity valuations.

The assumptions for the new equity allocation are based on a target allocation of 55% to large-cap equity securities, 30% to small- and mid-cap stocks, and 15% to international equities. This is the target allocation that the municipal owners have selected. FPLE is in the process of determining its allocation but we anticipate that the structure and assumed return will be similar to that utilized by the municipal owners. FPLE's equity return assumption will be modified in the December update, if necessary.

Based on our historical analysis of domestic and international equity returns, the following long-term assumptions for each asset class were determined:

	Model	Actual Return
	Assumption	(1970-2005)*
Large Capitalization U.S. Equities	9.50%	11.1%
Small to Mid-Capitalization U.S. Equities	10.25%	13.3%
International Developed Markets Equities	10.00%	10.5%

^{*} Actual returns are for the longest period for which all data series exist.

Weighting the individual rates by their proportion of the total equity fund results in a conservative return assumption of 9.8% for Funds 1B, 5, and 6.

It should be noted that the weights described above represent percentages of the equity fund, not the total fund. Since equities cannot exceed 70% of the total fund, the allocation to international, for example, would not exceed approximately 10% of the total fund (70% of the total fund times the 15% allocation).

The current inflation and investment return assumptions are shown in the following table:

Current Assumptions (Pre-Tax Returns)

		Current As	sumptions
Fund	Investments	Nominal	Real
1A	Taxable Bonds	6.0%	3.0%
1B	Diversified Stocks	9.8	6.8
1C	Cash/Short-Term	3.5	0.5
2	Taxable Bonds	6.0	3.0
3	Tax-Exempt Bonds	4.8	1.8
4	Cash/Short-Term	3.5	0,5
5	Diversified Stocks	9.8	6.8
6	Diversified Stocks	9.8	6.8
Inflation		3.0	

^{*} real return = nominal return - inflation

Real Return Assumptions

Exhibit 2 shows the historic real returns produced by market indices representative of each fund's investments compared to our current assumptions. Exhibit 3 compares the funds' actual returns since inception to our assumptions and to representative market indices.

The exhibits show that our real return assumptions for bonds continue to be conservative. Both actual and index returns have exceeded our assumptions. This is due largely to the long-term bull market in bonds that we have experienced until recently. However, given the current environment with the Federal Reserve continuing to raise short-term rates, actual bond returns may lag our assumptions in the near term. This should not be cause for concern since the assumed returns are designed to be long-term estimates over the funding life, and variation from those estimates on a year to year basis is to be expected.

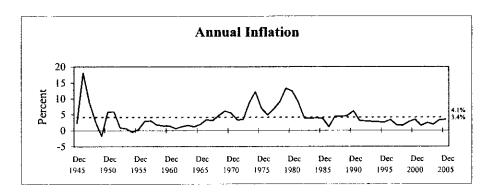

The results for the stock funds are somewhat more mixed. Our former real return expectations of 6.5% appear conservative when compared to long-term historical numbers (Exhibit 2). However, our nominal returns (Exhibit 3) have lagged the assumed 9.5% return by about 1% per year since inception. Part of the reason for this underperformance is that this ten year period includes a three year market decline (2000-2002) that is rivaled only by the great depression and the mid 1970's declines. In addition, about half of the shortfall is due to inflation running about 0.5% less than

anticipated. Given the relative uniqueness of this period, we continue to believe that the assumed returns for the stock funds remain conservative.

The only change that we are recommending at this time is the increase in the equity return assumption from 9.5% to 9.8% to reflect the addition of small to mid cap and international stocks. We are not recommending any change to the assumptions for bonds. We believe that the current assumptions are conservative estimates of future long-term market results.

Inflation Assumptions

After declining to 1.9% in 2003, inflation rose at a rate of 3.4% in 2005, in part due to increasing energy costs. In an attempt to keep inflation under control, the Federal Reserve began a series of short-term interest rates hikes in the second quarter of 2004 that continued throughout 2005. At year-end 2005 the fed funds rate stood at 4.25%, almost a full percent greater than inflation. This inflation level is still well below the long-term averages and most economists are predicting only modest inflation growth going forward.

While inflation has been under our 3% assumption much of the time the trust has been in existence, we still believe that 3% is a good long-term assumption. This is somewhat lower than the long-term historical average of 4.1%; however, the Fed's current approach to controlling inflation should minimize the inflation extremes seen in the post-WWII period and during the 1970s.

Funding Assurance Escrow Earnings Assumptions

The escrow funds were designed as short-term investment vehicles to hold additional contributions, some portion of which may ultimately be placed into the trust fund. Allowed investments under the escrow agreement include treasury and fully-backed agency paper with a maturity not more than the earlier of two years or December 31, 2007 and money market funds with similar investment criteria as those applicable to the trust. The joint owners chose to invest their escrow amounts in money market funds. The taxable securities fund invests in taxable instruments such as treasury bills and commercial paper. The tax-exempt securities fund holds municipal, tax-exempt securities. Currently, all municipal owners are invested in the taxable securities fund, and FPLE anticipates moving to this fund once the escrow accounts are transferred to the new custodian, Mellon Bank.

As with the other funds, we developed return assumptions by reviewing market indices on similar investments. The following table shows the returns for the Lipper Money Market Indices for both taxable and tax-exempt funds.

Lipper Money Market Index Returns (Periods Ending December 31, 2005)

	Taxable	Tax-Exempt
5 Years	2.5%	1.6%
10 Years	3.8	2.4
Assumption	3.5	2.3

As with the other assumptions, we do not recommend any changes to the escrow return estimates at this time. Our assumptions are in line with, if not slightly less than, longer-term history.

Funding Schedule Changes

There have been only modest changes to the funding schedule this year. One change involves the addition of a new fund, Fund 6. This was the result of the proposed diversification of the equity fund. To date, both the taxable and tax-exempt owners have invested in the sole non-qualified equity fund (Fund 5). Fund 5 investments were originally placed in an S&P 500 index fund that had advantages for both taxable and tax-exempt owners. For the taxable owner, the index fund is inherently lower turnover (less than 10%), thus limiting the level of realized capital gains and the resultant taxes. For the tax-exempt owners, it provides broad large cap exposure at a minimal cost.

With the proposed move into small- to mid-cap and international stocks, the issue of tax management became more central. Understandably, the taxable owner wanted managers who would consider taxes as part of their strategy, while the tax-exempt owners had no need of such a capability. As a result, it was decided to create two non-qualified equity funds, one for the taxable owner and one for the three tax-exempt owners. Each group then can select managers appropriate to their needs.

The other modification to the funding model was the change in the shutdown date from October 2026 to March 2030. This was due to Seabrook gaining approval from the NRC to extend their license to recapture the approximately three and one half years from the time the license was granted until Seabrook began actual operation. As a result the ultimate completion of decommissioning now occurs at year-end 2050. Contributions are also expected to continue until 2030 in order to equitably spread the cost of decommissioning across all consumers.

As with last year's approved model, this model also assumes that assets may be invested in equities, up to 25% of the trust, during the tail decommissioning period (except for the final five years). This allocation is subject to the constraint that there must always be at least 3.3 times the next year's decommissioning expenditures invested in cash or liquid fixed income investments.

In addition to the funding model, changes were made to the computation of the 2006 year-end balances. Previously the calculations assumed that all transfers between funds happened at the end

of the year. However now that FPLE is making meaningful transfers during the year, the calculations were modified to reflect the actual quarterly transfers. Since one of the goals of the transfers is to increase their equity allocation, this change has in effect of increasing fund earnings and thus year-end 2006 balances.

Funding Schedule Results

Required contributions for 2007 are projected to be \$529,460 into the trust fund and \$176,487 into the escrow accounts. This is a significant reduction from the \$2.6 million projected for 2007 in last year's funding schedule. The projections also indicate that FPLE is currently overfunded; that is, its past contributions combined with the future earnings are more than sufficient to pay its share of all expenses including decommissioning costs.

Several factors contributed to the contribution decline. The major factor was the four year license extension. This resulted in four more years of earnings when the fund is at its peak value. It also caused contributions to be spread over 24 years versus the prior 20 years. The increase in the equity return assumption by 0.3% also had a strong impact. Other factors that contributed, but to a lesser extent, included strong January 2006 returns that boosted the end of February values used in the computation of year-end 2006 balances, the change in methodology for computing the 2006 year-end balances. FPLE's decision to focus its higher earning equity investments in the non-qualified trust which is not taxed within the trust, and Taunton's and Hudson's decision to invest in equities.

The trust is expected to be slightly over 53% funded by the end of 2006 and close to 55% by year-end 2007. At year-end 2005 the trust was just under 53% funded. With assets projected to be close to \$375 million at the end of this year, the trust is now in a position where earnings are a much larger component of trust growth than contributions.

The full funding and funding assurance escrow schedules are attached as Exhibit 4.

Conclusions

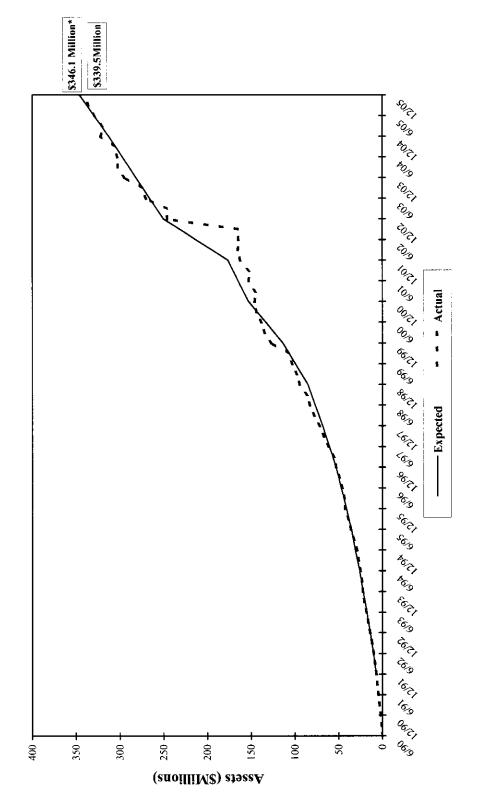

We applaud the Joint Owner's decision to seek approval for greater diversification of their equity holdings. The asset/liability studies conducted for the Joint Owners show that additional equity diversification increases the trust return while reducing trust risk. In addition, we continue to believe that the funding model and its underlying assumptions, taken in their entirety, represent a reasonable projection of future trust fund growth and associated funding requirements.

Mr. Gene St. Pierre, Site Vice President c/o James M. Peschel Seabrook Station FPL Energy Seabrook, LLC PO Box 300 Seabrook, NH 03874

SUBJECT:

SEABROOK STATION, UNIT NO. 1 - ISSUANCE OF AMENDMENT

RE: RECAPTURE OF ZERO-POWER AND LOW-POWER TESTING TIME

(TAC NO. MC6548)

Dear Mr. St. Pierre:

The Commission has issued the enclosed Amendment No. 105 to Facility Operating License (FOL) No. NPF-86 for Seabrook Station, Unit No. 1. The amendment consist of a change to the FOL in response to your application dated March 28, 2005, as supplemented by letter dated September 23, 2005.

The amendment extends the expiration date of the FOL from October 17, 2026, to March 15, 2030, to recapture zero- and low-power testing time. The extended date is 40 years from when the full-power license was issued, in accordance with Section 103.c of the Atomic Energy Act of 1954, as amended, Title 10 of the *Code of Federal Regulations* Sections 50.56, and 50.57, and Nuclear Regulatory Commission policy as stated in the Staff Requirements Memorandum SECY-98-296, dated March 30, 1999.

A copy of the related Safety Evaluation is also enclosed. Notice of Issuance will be included in the Commission's biweekly *Federal Register* notice.

Sincerely.

G. Edward Miller, Project Manager

Plant Licensing Branch 1-2

Division of Operating Reactor Licensing Office of Nuclear Reactor Regulation

Docket No. 50-443

UNITED STATES NUCLEAR REGULATORY COMMISSION

WASHINGTON, D.C. 20555-0001

FPL ENERGY SEABROOK, LLC, ET AL.*

DOCKET NO. 50-443

SEABROOK STATION, UNIT NO. 1

AMENDMENT TO FACILITY OPERATING LICENSE

Amendment No. 105 License No. NPF-86

- 1. The Nuclear Regulatory Commission (the Commission) has found that:
 - A. The application for amendment filed by FPL Energy Seabrook, LLC, et al. (the licensee), dated March 28, 2005, as supplemented by letter dated September 23, 2005, complies with the standards and requirements of the Atomic Energy Act of 1954, as amended (the Act), and the Commission's rules and regulations set forth in 10 CFR Chapter I;
 - B. The facility will operate in conformity with the application, the provisions of the Act, and the rules and regulations of the Commission;
 - C. There is reasonable assurance: (i) that the activities authorized by this amendment can be conducted without endangering the health and safety of the public, and (ii) that such activities will be conducted in compliance with the Commission's regulations;
 - D. The issuance of this amendment will not be inimical to the common defense and security or to the health and safety of the public; and
 - E. The issuance of this amendment is in accordance with 10 CFR Part 51 of the Commission's regulations and all applicable requirements have been satisfied.

^{*}FPL Energy Seabrook, LLC (FPLE Seabrook) is authorized to act as agent for the following: Hudson Light & Power Department, Massachusetts Municipal Wholesale Electric Company, and Taunton Municipal Light Plant. FPLE Seabrook has exclusive responsibility and control over the physical construction, operation and maintenance of the facility.

- 2. Accordingly, Facility Operating License NPF-86 is amended by changes to the Operating License as indicated in the attachment to this license amendment.
- 3. This license amendment is effective as of its date of issuance and shall be implemented within 30 days of issuance.

SAFETY EVALUATION BY THE OFFICE OF NUCLEAR REACTOR REGULATION RELATED TO AMENDMENT NO. 105 TO FACILITY OPERATING LICENSE NO. NPF-86

FPL ENERGY SEABROOK, LLC

SEABROOK STATION, UNIT NO. 1

DOCKET NO. 50-443

1.0 INTRODUCTION

By letter dated March 28, 2005, as supplemented by letter dated September 23, 2005, FPL Energy Seabrook, LLC (FPLE or the licensee) submitted a request for a change to the Operating License for Seabrook Station, Unit No. 1 (Seabrook).

The current operating licensed term for Seabrook ends on October 17, 2026. This is 40 years from the date of the zero-power operating license, which was issued on October 17, 1986. The amendment would extend the expiration date of the operating license from October 17, 2026, to March 15, 2030. The extended date for termination of the operating license would be 40 years after issuance of the full-power operating license which was issued on March 15, 1990. This proposed amendment is not a request for license renewal under Title 10 of the *Code of Federal Regulations* (10 CFR) Part 54.

The supplement dated September 23, 2005, provided additional information that clarified the application, did not expand the scope of the application as originally noticed, and did not change the Nuclear Regulatory Commission (NRC or the Commission) staff's original proposed no significant hazards consideration determination as published in the *Federal Register* on May 24, 2005 (70 FR 29797).

2.0 REGULATORY EVALUATION

Section 103.c of the Atomic Energy Act of 1954, as amended (the Act), provides that a license is to be issued for a specific period not to exceed 40 years. Section 50.51.(a) of 10 CFR specifies that each license will be issued for a fixed period of time not to exceed 40 years from the date of issuance. Additionally, 10 CFR 50.56 and 10 CFR 50.57 allow the issuance of an operating license pursuant to 10 CFR 50.51 after the construction of the facility has been substantially completed, in conformity with the construction permit and when other provisions specified in 10 CFR 50.57 are met. Consistent with Section 103.c of the Act and Sections 50.51, 50.56, and 50.57 of 10 CFR, the licensee, by its application of March 28, 2005, and supplement dated September 23, 2005, seeks an extension that would permit Seabrook to operate for the full 40-year lifetime from the date when the full-power operating license was issued. The proposed extension is consistent with the Commission's policy stated in the Staff Requirements Memorandum (SRM) dated March 30, 1999, from Andrew L. Bates, Acting

Secretary, to William D. Travers, Executive Director for Operations. The SRM was in response to SECY-98-296, "Agency Policy Regarding Licensee Recapture of Low-Power Testing or Shutdown Time for Nuclear Power Plants," and stated:

The Commission has approved the staff's plans to grant the Grand Gulf license amendment to amend the expiration date of the license to recover the time spent in low power testing before receiving the Full Power Operating License (FPOL). The Commission also approved the granting of similar requests from other licensees provided that the 40-year license term began with the issuance of a Low Power Operating License (LPOL) and a separate FPOL was issued.

3.0 TECHNICAL EVALUATION

The NRC staff has evaluated the environmental and safety issues associated with the proposed amendment which would allow 41 months of additional plant operation for Seabrook. The major safety issues are the effects of aging and neutron fluence on plant structures and equipment. This is addressed in Section 3.1.

FPLE's request for an extension of the operating license is based on the fact that a 40-year service life was considered during the design and construction of the plant. Although this does not mean that some components will not wear out during the plant's lifetime, design features were incorporated that provide the ability to inspect structures, systems, and components during this lifetime. Surveillance, ability to inspect, and maintenance practices, that were implemented in accordance with the American Society of Mechanical Engineers (ASME) Boiler and Pressure Vessel Code (Code) for inservice inspection and testing of pumps and valves and Seabrook's Technical Specifications (TSs), provide assurance that any degradation in the plant's safety equipment will be identified and corrected to provide safe operation of the plant's proposed license extension period. The specific provisions and requirements for ASME Code testing are set forth in 10 CFR 50.55a.

3.1 Safety Assessment

3.1.1 Neutron Damage of the Reactor Pressure Vessel

The reactor pressure vessel (RPV) was designed and fabricated in accordance with the requirements of Section III, Class 1, of the ASME Code Edition, Addenda, and ASME Code Cases applicable at the time of design and construction. Operating limitations of the ASME Code and of Appendix G, "Fracture Toughness Requirements," of 10 CFR Part 50 are also applicable. The RPV and the reactor coolant system were designed to allow inspections in accordance with Section XI of the ASME Code. The NRC staff's evaluation approving the programs and their implementation with respect to these structures is contained in the Seabrook Safety Evaluation Report (NUREG-0896 and its nine supplements).

Over the operating life of a reactor vessel, ferritic materials exposed to neutron irradiation will undergo a decrease in fracture toughness. A surveillance program in accordance with the requirements of Appendix H, "Reactor Vessel Material Surveillance Program Requirements," of 10 CFR Part 50, monitors changes in fracture toughness. The surveillance program ensures that the safety margins remain sufficient to prevent brittle failure of the reactor vessel.

According to the currently-approved version of the reactor vessel surveillance program withdrawal schedule, contained in the Seabrook Technical Requirements Manual, three capsules have been withdrawn to date. Results from capsules U and Y have been reported to the NRC. Capsule V was scheduled to be withdrawn during the refueling outage at the end of Cycle 10.

The results of the analysis of capsule V must be reported to the NRC within one year of withdrawal. The results from capsules U and Y, as analyzed using the guidance in Regulatory Guide (RG) 1.99, indicate that the surveillance data are credible. Accordingly, the Reference Temperature nil-ductility transition (RT_{NDT}), Reference Temperature pressurized thermal shock (RT_{PTS}) and upper-shelf energies were determined for each vessel beltline material. It was determined that the plate and weld material upper-shelf energies will remain above 50 ft-lb through the end of the original license period and through the period being sought for recapture. Also, based on surveillance data or based on RG predictions, as appropriate, the RT_{PTS} values are below the screening criteria at the end of the period being sought for recapture. Finally, the adjusted RT_{NDT} values have been used to adjust the operating parameters, i.e., reactor coolant system pressure/temperature limitations on heatup, cooldown, and low temperature overpressure protection (LTOP) specified in TS 3/4.4.9.

3.1.2 Compliance with Appendices G and H of 10 CFR Part 50, and 10 CFR 50.61

Appendix G of 10 CFR Part 50, and 10 CFR 50.61, contain screening criteria for Charpy upper-shelf energy (USE) and pressurized thermal shock, respectively. Appendix H of 10 CFR Part 50 contains a description of reactor vessel surveillance program requirements.

The screening criteria in Appendix G are that the reactor vessel beltline material have a USE of no less than 50 ft-lb. The data from the licensee's response to Generic Letter 92-01, Revision 1, Supplement 1, as entered into the Reactor Vessel Integrity Database, were evaluated by the NRC staff and the minimum USE at the end of the requested license extension period is above 60 ft-lb for the material with the minimum USE, lower-shell plate R1808-2. The minimum USE is above the minimum required USE of 50 ft-lb which satisfies the requirements of 10 CFR 50, Appendix G.

Appendix G also requires that the plant operating parameters (i.e., reactor coolant system pressure/temperature limitations on heatup, cooldown, and LTOP based on RT_{NDT}) must be adjusted to account for the effects of neutron radiation. Seabrook used results of available surveillance capsule data to adjust the plant operating parameters, as required.

The screening criteria in 10 CFR 50.61 are that the reference temperature RT_{PTS} values be less than 270 °F for plates, forgings, and axial welds, and 300 °F for circumferential welds at the expiration of the license. According to 10 CFR 50.61, the assessment of the beltline materials must be updated upon request for a change in the expiration date for the facility. The request for recapture of testing time constitutes a request for change in the expiration date; therefore, an updated assessment is required. By letter dated September 23, 2005, Seabrook provided updated values for RT_{PTS} for all of the reactor vessel beltline materials. The values, which are presented in Table 1, satisfy the requirements of 10 CFR 50.61 at the end of the requested period of recapture.

In response to a request for additional information, the licensee provided by letter dated September 23, 2005, a description of the effect of a recapture period on the surveillance capsule withdrawal schedule. The withdrawal schedule was determined per the guidelines in American Society for Testing and Materials (ASTM) E-185. The RT_{NOT} temperature shift (ΔRT_{NOT}) values were calculated using updated fluence values assuming 40 effective full-power years (EFPYs) at the end-of-license (EOL) for all reactor vessel beltline materials. The projected maximum EOL transition temperature increase of the beltline materials is less than 100 °F. As the maximum transition temperature shift is less than 100 °F at EOL, the number of surveillance capsules required to be tested per ASTM E-185 is unchanged at three capsules. The Seabrook surveillance capsule program has pulled and tested three capsules to date. A fourth capsule is scheduled to be removed at a time when the capsule fluence corresponds to not-less-than-once or greater-than-twice the peak inside-diameter fluence at EOL. The scheduled removal time is 21 EFPYs with a fluence of approximately 4.24 x 10¹⁹ n/cm². With a new EOL fluence of 2.20 x 10¹⁹ n/cm², the last capsule will meet the ASTM E-185 criteria removal time criteria and the current reactor vessel surveillance program is unaffected. Therefore, the proposed license expiration date does not require revision of the existing Seabrook surveillance capsule withdrawal schedule.

Based on the above, there is reasonable assurance that Seabrook will, for the proposed license term extension requested, continue to meet the requirements of 10 CFR 50.61, Appendices G and H, and their operating license with respect to the RPV.

Table 1: RTPTS Calculations for Seabrook Beltline Region Materials, 40 EFPYs

Material	Fluence (x10 ¹¹ n/cm², E>1.0 MeV)	FF	CF ('F)	ΔRT _{PTS} (c) (*F)	Margin (°F)	RT _{NDT(U)} (a) (*F)	RT _{PTS} ^(b) (*F)

Notes:

- (a) Initial RT_{NOT} values are measured values
- (b) $RT_{PTS} = RT_{NDT(U)} + \Delta RT_{PTS} + Margin (*F)$
- (c) $\Delta RT_{PTS} = CF * FF$
- (d) Using Credible Surveillance Data

3.1.3 Structures

The concrete and steel Category I structures at Seabrook were designed and constructed in accordance with the General Design Criteria of Appendix A, "General Design Criteria for Nuclear Power Plants," to 10 CFR Part 50. This is discussed in Sections 3.1 and 3.2 of the Updated Final Safety Evaluation Report. The licensee's design basis, fabrication, construction, and implementation of quality assurance (QA) criteria for the plant were reviewed by the NRC staff when the plant was being licensed for low-power operation. The NRC staff's evaluation approving the programs and its implementation with respect to these structures are contained in NUREG-0896 and its nine supplements. Industrial experience with concrete and steel structures confirms that a service life in excess of 40 years may be anticipated.

The major codes and specifications used in the design and construction of the Category I concrete and steel structures were, respectively, American Concrete Institute (ACI) 318-71, "Building Code Requirements for Reinforced Concrete," and the American Institute of Steel Constructions Specification, "Specification for the Design, Fabrication, and Erection of Structural Steel for Buildings." The foundations of the seismic Category I structures are reinforced concrete designed to ACI 318-71. Section 3.8 of NUREG-0896 stated that the criteria that were used in the analysis, design, and construction of seismic Category I structures at Seabrook account for anticipated loadings and postulated conditions that may be imposed on the structures during their service lifetime, which would include the requested 3.4 years of additional power operation.

These criteria are in conformance with the established criteria, codes, standards, and specifications acceptable to the NRC staff. The licensee's use of the indicated codes, standards, and specifications in the plant's design, analyses, and construction, and the licensee's QA program required by Appendix B, "Quality Assurance Criteria for Nuclear Power Plants and Fuel Reprocessing Plants," to 10 CFR Part 50, as approved by NUREG-0896 and its supplements, provide reasonable assurance that the concrete and steel structures will, for the proposed license term extension requested by the licensee, continue to meet the applicable provisions of the rules and regulations of the Commission, and the Seabrook license.

3.1.4 Mechanical Equipment

With regard to equipment lifetime, Seabrook was designed, licensed, and constructed for a 40-year service life. The reactor coolant system components and support systems were analyzed for the integrated effects of radiation damage and cyclic loadings (with added margin) that could reasonably be expected to occur in the 40-year lifetime from the FPOL. Surveillance and maintenance practices were implemented in accordance with the ASME Code for inservice inspection and inservice testing of pumps and valves, a maintenance program satisfying 10 CFR 50.65 requirements, and the facility's TSs. These TSs are part of the plant's operating license and have been approved by the NRC, as are all subsequent changes to the TSs. The specific provisions and requirements for ASME Code testing are set forth in 10 CFR 50.55a.

Surveillance, maintenance, and testing requirements for mechanical equipment are in place at the plant to verify operability, or to detect degradation and ensure that the equipment that does degrade is replaced or other corrective actions are taken. In addition, subcomponents such as nonmetallics (e.g., gaskets and O-rings) are inspected and replaced as necessary, as part of routine maintenance in order to ensure the design life of equipment. The licensee stated that surveillance, inspection, and testing requirements at Seabrook, which apply during the operating life of the plant, include the following:

ASME Code Section XI: Equipment that is safety-related is ASME Code Class 1, 2, or 3 and is subject to the inservice inspection and testing requirements of Section XI and 10 CFR 50.55a, except where relief has been granted in writing from these requirements. These requirements apply throughout the operating life of a plant and will provide reasonable assurance that mechanical components will be properly monitored throughout the plant lifetime.

Technical Specifications (TSs): 10 CFR 50.36 requires the establishment of limiting conditions for operation (LCOs) for certain equipment. (LCOs are the lowest functional capability or performance levels of equipment required for safe operation of the facility). This equipment is subject to the surveillance and testing requirements in the TSs to assure systems are operable. These surveillance requirements include calibration and inspection of systems and components to ensure that operation of the plant will remain in accordance with the [LCOs].

10 CFR Part 50, Appendix J: Equipment and components associated with containment penetrations, including containment isolation valves, are subject to the leak testing requirements in Appendix J, "Primary Reactor Containment Leakage Testing for Water-Cooled Power Reactors." This is for Type B and C testing of valves and penetrations, and Type A testing of the overall containment structure. These tests verify the integrity of the containment and associated components, and confirm that the containment and associated components are capable of performing their designed safety function as assumed in the accident analysis for Seabrook.

From this evaluation, the NRC staff considers that compliance with the codes, standards, and regulatory requirements to which mechanical equipment were analyzed, constructed, tested, and inspected provide adequate assurance that the structural integrity of equipment important to safety will be maintained during the operating lifetime of the plant and during the additional period authorized by this amendment. Any significant degradation by such equipment would be discovered and the equipment restored to an acceptable and operable condition.

3.1.5 Electrical Equipment

Aging analysis has been performed for all safety-related electrical equipment in accordance with 10 CFR 50.49, "Environmental qualification of electric equipment important to safety for nuclear power plants," identifying qualified lifetimes for this equipment. These lifetimes have been incorporated into plant equipment maintenance and replacement practices to ensure that all electrical equipment important to safety remains qualified and available to perform its safety function regardless of the overall age of the plant. If a component has a qualified life of tess than 40 years, its replacement is scheduled through the maintenance program. Therefore, the NRC staff considers that the environmental qualification program will support the proposed amendment.

3.1.6 QA and Maintenance Programs

In licensing Seabrook, the NRC staff reviewed the QA programs and the conduct of operations including the maintenance procedures at Seabrook. The QA programs for Seabrook's operations will assess how the organization is following procedures and meeting requirements for these operations. This would include the maintenance programs at Seabrook that assure the equipment is operable. In NUREG-0896, the NRC staff concluded that the QA programs and maintenance procedures were acceptable. The maintenance programs must operate in conformance with 10 CFR 50.65, "Requirements for Monitoring the Effectiveness of Maintenance at Nuclear Power Plants."

Inspections by the NRC staff of the QA and maintenance programs at Seabrook, since the plant was licensed, found that these programs remain acceptable. The QA programs meet the requirements of Appendix B to 10 CFR Part 50.

Therefore, the NRC staff considers that the licensee's implementation and use of these programs at Seabrook provides reasonable assurance that equipment important to safety will, for the proposed license term extension requested by the licensee, be in conformity with the applicable provisions of the rules and regulations of the Commission, and the Seabrook license.

Based on the discussion above and on the safety and environmental issues involved with granting an extension to the operating license, there are no safety issues that would preclude the additional operation of Seabrook. Based on this, the NRC staff concludes that the proposed amendment is acceptable; however, it should be noted that the above evaluation would not be sufficient for license renewal under 10 CFR Part 54.

4.0 STATE CONSULTATION

In accordance with the Commission's regulations, the New Hampshire and Massachusetts State officials were notified of the proposed issuance of the amendment. The State officials had no comments.

5.0 ENVIRONMENTAL CONSIDERATION

Pursuant to 10 CFR 51.21, 51.32, and 51.35, an environmental assessment and finding of no significant impact has been prepared for the proposed amendment and published in the *Federal Register* on December 20, 2005 (70 FR 75487). Accordingly, based upon the environmental assessment, the staff has determined that the issuance of the amendment will not have a significant effect on the quality of the human environment.

6.0 CONCLUSION

The Commission has concluded, based on the considerations discussed above, that (1) there is reasonable assurance that the health and safety of the public will not be endangered by operation in the proposed manner, (2) such activities will be conducted in compliance with the Commission's regulations, and (3) the issuance of the amendment will not be inimical to the common defense and security or to the health and safety of the public.

TABLE 1 SEABROOK, FPL NUCLEAR AND INDUSTRY UNIT CAPABILITY FACTORS

Seabrook, FPL Nuclear and Industry World Association of Nuclear Operators Performance Indicator Index (1)

able 2

TABLE 2 SEABROOK, FPL NUCLEAR AND INDUSTRY WORLD ASSOCIATION OF NUCLEAR OPERATORS PERFORMANCE INDICATOR INDEX

Seabrook, FPL Nuclear and Industry World Association of Nuclear Operators Performance Indicator Index (1)

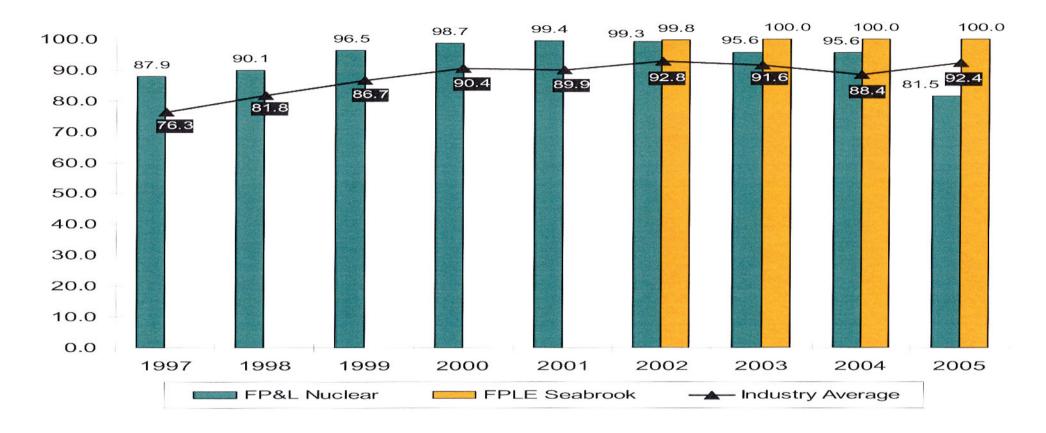

TABLE 3 SEABROOK AND FPL NUCLEAR SAFETY AND RELIABILITY PERFORMANCE NRC INDICATORS

Seabrook and FP&L Nuclear Units NRC Safety and Reliability Performance Indicators (4th Quarter 2005)

	PSL 1	PSL 2	PTN 3	PTN 4	Seabrook
Initiating Event Cornerstone					
Unplanned Reactor Shutdowns per 7000 Critical Hours (Automatic and Manual)					100 (100)
Unplanned Reactor Shutdowns with Loss of Normal Heat Removal			10 - 10	446	7836
Unplanned Power Changes per 7000 Critical Hours					
Mitigating Systems Cornerstone			,		
Safety System Unavailability		155			
Safety System Functional Failures					
Barriers Cornerstone					
RCS Activity					
RCS Leakage					
Emergency Response Organization (ERO) Drill/Exercise Performance					
Emergency Response Organization (ERO) Drill/Exercise Performance					
ERO Drill Participation					
Alert and Notification System Performance		Company of the second			
Occupational Radiation Safety Cornerstone					
Occupational Exposure Control Effectiveness			() 1 2 4 2		
Public Radiation Safety Cornerstone					
RETS/ODCM Radiological Effluent Occurrence				1.02 -	
Physical Protection Cornerstone					
Protected Area Security Equipment Performance Index
