

QUESTIONS AND ANSWERS

RFP #2023-018

NEW HAMPSHIRE DEPARTMENT OF ENERGY
REQUEST FOR PROPOSALS

Grants for Renewable Energy Generation Projects in the Nonresidential Sector

	Questions	Answers
1.	Would accepting the grant money require the company to sell the Thermal RECs generated by this project on the NH market in order to achieve the desired increase of the annual supply. If so, would the company be required to sell these RECs for the entire lifetime of the asset or only for a certain period?	Per RFP 2023-018 Section C.1. Proposers must propose new investments in eligible renewable energy projects that will result in the <i>production</i> of electric or thermal RECs or both. Section C.5. Grantees must commit to seeking REC eligibility in New Hampshire for the project, including but not limited to submitting a complete application for REC eligibility to the Department. Proposers are expected to maintain their eligibility and produce RECs for the lifetime of the project; however, the RFP does not require the sale of RECs once they are minted.
