Robert Worth

Hi, I received an email asking for comments on the state's energy programs. My first thought when I think about NH's incentive programs is the lack of funding for the residential solar program. We installed a relatively small array of solar panels that produce less than 1000kw per month. That cost us \$23,000. We did get federal income tax credit, but there is no way for us to realize any financial gain in at least 15 years at our historic energy usage rate. We did it to help the environment and do our part to be part of the solution. But, we fully expected NH to help offset at least a small portion of our cost, seeing as to how the feds are passing trillion dollar bills to encourage solar spending. That's it, thanks for listening,
