Sharon Monroe

I have recently had solar panels installed on our house so only feel able to make a couple of comments on the residential solar/wind program.

First, I never did receive my rebate as I was told funds were no longer available although my application was submitted and the program was offered when we installed the system. It was one of the incentives for us to have the system installed and I would appreciate it if we would be eligible for these funds. Would you be able to check on this for me? I feel if the program is offered, anyone who meets the criteria should receive the rebate in the year their solar panels were installed.

The only other comment I have is addressing the battery backup. I believe it should be a separate rebate from the solar. I was surprised to learn of the high cost of the battery and we would consider adding it if it becomes an affordable option.

We are very pleased with our solar system and feel it is making a difference in so many ways: our monthly energy costs, carbon footprint, drain on the grid for others. It is important for NH to provide incentives and reinforce their commitment to increasing and improving renewable energy.

Thank you,
